

EIS Core Insurance Suite on AWS with EIS Group

Unify the entire insurance lifecycle, from policy administration to customer

EIS GROUP 

aws  competency

EIS Group is an APN Technology Partner and AWS Financial Competency Partner holder

Challenges

To maintain competitive advantage in the digital economy, insurance companies need to provide consistent, engaging customer experiences at each point in the customer journey, from the company website to social media to text and phone interactions. To achieve this, insurers must build digital-first business models that provide more value for customers and establish much higher levels of service than legacy insurance systems can provide. Those insurers that can supplement their deep industry expertise with the scalable computing power of the modern cloud and a unified digital core will survive, and even thrive. Armed with this combination, they'll be positioned to create an engaging user experience by leveraging insights that drive both profitability and customer loyalty, while operating more efficiently.

Industry trends

The EIS platform was designed to take advantage of the cloud and provide insurers with affordable, reliable, and scalable support for business applications. It unifies the entire insurance lifecycle, establishes a rich, holistic hub for customer data, and allows organizations to freely connect this data with new and existing systems. This level of connectivity is ideal for insurance companies, enabling carriers to shift business models and outpace industry disruption.

Solutions Designed for Multiple Insurance Segments

EIS Suite consists of PolicyCore, BillingCore, ClaimCore, and CustomerCore applications to provide complete end-to-end, multiline systems to support the full insurance lifecycle—including policy administration, underwriting, claims, billing, and customer management. The operational applications are fully integrated and deliver a single view of the customer, but their modular nature enables them to be used alone or as a comprehensive suite.

Benefits

To compete in the new platform economy, insurance companies need modern core and digital platforms built on the cloud. With an EIS Group digital insurance platform optimized for Amazon Web Services (AWS), insurers can enjoy a wide range of benefits, at a lower cost than their on-premises insurance solutions:

Financial Services Partner Solutions

Discover scalable and secure Financial Services solutions that will empower you to achieve your business needs with Amazon Web Services (AWS) and AWS Partner Network (APN) Partners that have attained Financial Services AWS Competency designations. Customer ready solutions are based on architectures validated by AWS, include a combination of AWS services and APN Partner technologies, can be deployed quickly with solution accelerators to accelerate your cloud transformation.

Increased agility and innovation

Ongoing access to new digital technologies and ecosystems

Elastic scalability in a secure, reliable environment

Modern experience to meet evolving customer needs

Faster deployment and easier maintenance

Smoother, more frequent capability upgrades

Solution overview

EIS also offers specific solutions to support multiple insurance segments:

Group and Voluntary Benefits

Create a benefits-based business, no longer limited by what your outdated technology and labor-intensive processes will allow.

Personal Lines

Move in step with rising customer expectations in personal insurance markets and deliver the personalized service that fosters loyalty—and higher revenues.

Commercial Lines

Serve commercial customers faster and better—while transforming performance company-wide.

EIS Group on AWS

Unlike legacy insurance systems, EIS was designed to move carriers closer to their customers by unifying the entire insurance lifecycle; establishing a rich, holistic and adaptive experience for customers; and allowing insurers to freely connect to new and existing ecosystems. With AWS, insurers gain access to extensive resources and service offerings, along with the stability of EIS. Driven by the needs of innovative customers and partners in a wide range of industries, AWS offers advanced services, from security tools to voice recognition features, available to all its partners and customers. For insurers, that means the freedom to focus on product and service innovation, with direct benefits for both customers and the bottom line.

Getting started

The EIS Suite has been designed to scale, integrate, and evolve as your business needs change over time. By leveraging EIS on AWS, you gain the ability to accelerate your implementation time and reduce costs while taking advantage of the benefits of the cloud.

About AWS: For 10 years, Amazon Web Services has been the world's most comprehensive and broadly adopted cloud platform. AWS offers over 100 services for compute, storage, databases, analytics, mobile, Internet of Things (IoT) and enterprise applications from 49 Availability Zones (AZs) across 18 geographic regions in the United States, Canada, Europe, Asia, Australia and South America. AWS services are trusted by more than a million active customers around the world – including the fastest growing startups, largest enterprises, and leading government agencies – to power their infrastructure, make them more agile, and lower costs. To learn more about AWS, visit <http://aws.amazon.com>.
