- Best practice architecture for Oracle on AWS, shown in diagram and narrative form for all Oracle Technologies and
- Inform your business case with costs of the system once migrated to AWS, with sensible options for savings that can be
- Map your licenses for Oracle on to AWS and find any options that are available for reducing required licenses.

Customer Contribution

- Contact clckwrk and learn more about how our Oracle Readiness assessment can inform your business case, design
- Bring in your team. We get our experts together with yours to make sure we understand your Oracle estate in all of it's
- Ask questions about your readiness assessment in a one to one session with your dedicated Principle Consultant clckwrk

Key Activities

Firstly we have an initial call to understand the size of your Oracle estate and the applications you use. At this point there is no obligation to have an assessment completed and we can use the call to answer any questions you have about the process

Secondly we run a workshop either at your office, at our locations in London or Boston or over a video conference. We'll let you know who needs to attend and how long they will be needed for. During the workshop we get into the detail of each system and gather all the information we need for the assessment

Next we take the information gathered in the workshop and run our analysis. We'll map the best AWS services to use to run your systems, recommend best practice architecture for each system and let you know the cost of running those components in AWS and the impact on your Oracle licensing

Lastly we present the results of our analysis in an interactive session with you and your team. We'll talk through our analysis and answer questions and at the end you'll have a documented report with sections that are easy to take and use in your own documentation for you business case, design and migration plans

Solution Space

Discover scalable and secure solutions that will empower you to achieve your business needs with Amazon Web Services (AWS) and AWS Partner Network (APN) Partners that have attained AWS Competency designations. Customer ready solutions are based on architectures validated by AWS, include a combination of AWS services and APN Partner technologies, can be deployed quickly with solution accelerators like AWS Quick Starts, and feature optional consulting offerings provided by APN Partners, to accelerate your cloud transformation.
