Qubole on Data Lake Foundation PoC 47Lining Jumpstart Consulting Offer

Enable your data science team in weeks, not months

Qubole is natively designed for AWS and tightly integrated with its storage, compute, security, and other key architectural elements. Qubole's QDS on AWS is an ideal Autonomous Data Platform for any organization implementing big data projects on AWS.

Starter Package Deliverables

- Create data lake with data from any variety of your on-premises, third party, or public sources to answer your most important business questions
- Empower your data scientists with Qubole for collaborative analytics, using Hadoop, Presto, and Spark
- Complete cost analysis and ROI for full migration and on-going operations
- Assessment of operations and cross-collaboration

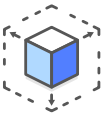
Customer Contribution

- Identification of up to 3 sources of 500GB total data for PoC
- Requirements for up to 3 business questions
- Availability of data science team for "test drives"

Key Activities

Ingest and validate submissions for an initial curated dataset

Demonstrate agile analytics with structured and unstructured data on Qubole platform, in close partnership with customer data scientists to answer key business outcomes



Use of spot instances and auto-scaling

Walk-through collaboration and visualization through use of Notebooks

---

Customer Ready Solutions

Discover secure, scalable solutions that help you achieve your business needs through a combination of AWS services and APN Partners that have attained AWS Competency designations. Based on architectures validated by AWS to accelerate your cloud transformation, you can deploy solutions quickly with AWS Quick Starts and optional Jumpstart consulting offers provided by APN Partners.
