

Giving you the power and responsiveness to stay ahead in a fierce business environment

Why Infor?

- Drive operational efficiencies
- Make data accessible and actionable
- Increase resiliency and reliability
- Enable distributed services
- Increase security and compliance
- Optimize operations
- Accelerate innovation
- Respond faster to change
- Simplify business continuity strategies
- Extend the value of your Infor investments
- Scale cloud with ease

Product overview

Infor and AWS support a faster path to transformation. Together, they offer organizations industry-specific, multi-tenant business cloud software, enabling organizations to be more agile, resilient, and efficient in responding to customer needs. Infor offers customers industry specific versions through its CloudSuite offerings. That approach provides businesses with tailored functionality relevant to the specific needs within their industry.

Product features

Unified Infrastructure

Proven multi-domain enterprise technology platform providing the foundation for business excellence

- Integration and automation
- Data fabric
- Security and compliance

User-centered experience

Providing an end-to-end framework for creating competitive advantage and differentiation through intuitive UX

- Enterprise workspace and mobility
- Application development

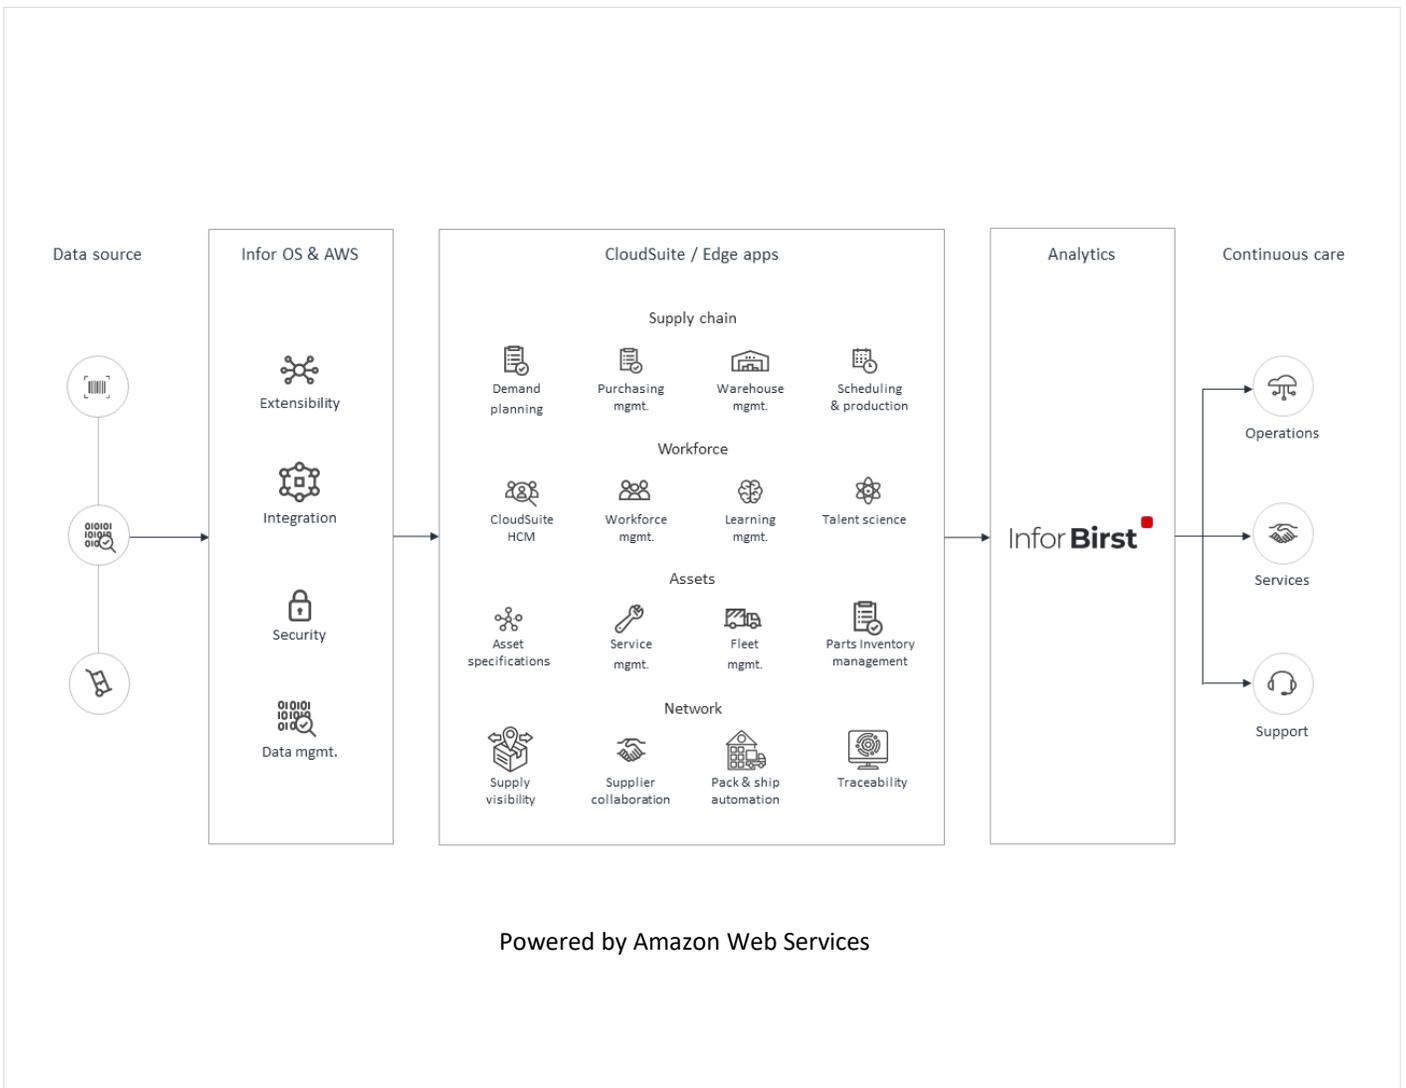

Future-enabled capabilities

Continuously built to adapt so that innovation is no longer a choice

- Artificial intelligence
- Intelligent process automation

How it works

Infor's Modern Data Architecture connects disparate technologies, capabilities, and services to create a common innovation platform for customers.

Differentiators

- **More value**—Based on common industry-driven processes. Infor offers templates, reporting, analytics, performance management, fraud, and security content delivered out-of-the-box to link back to transactional details for better decision-making.
- **Continuous innovation**—True SaaS multi-tenant applications deliver a constant stream of new industry-specific innovations without disruption or lengthy and expensive upgrade cycles.

What our customers are saying

The pandemic triggered us to implement the new workforce system that reduced the density of people in the factory. Not only did it minimize health risks, but it also improved productivity and job satisfaction. As we enter a post-COVID world, we plan to continue this schedule, so we can increase people density in our factories, and increase our manufacturing capacity and asset utilization.

- William G. Miller II, President and co-CEO, Miller Industries.
