Challenge – Increasing productivity and innovating at scale

**Accelerate business transformation with a unified workforce**

The imperative to innovate and increase productivity at scale, while reducing costs, has only intensified in our post-pandemic world. Employees expect more rewarding work, and organizations are under constant pressure to deliver accelerated growth and stay a step ahead of the competition. At the same time, many organizations are taxed with inefficient processes and skill shortages. These operational challenges are often exacerbated by standalone legacy systems that are difficult to integrate with, or extract data from, and are laden with technical debt. SS&C Blue Prism Cloud on AWS enables organizations to meet these business demands and capitalize on these challenges by automating complex business processes and seamlessly integrating them with existing systems.

Blue Prism Cloud – Intelligent Automation on AWS

**First fully managed and hosted intelligent automation platform on AWS**

- A fully managed, secure platform with guaranteed service levels (monitoring, redundancy and business continuity) which can seamlessly integrate with legacy systems
- Pre-configured digital workers that use software and AWS services including ICR and no code, human-to-machine forms, empowering organizations to accelerate business transformation and assign repetitive, time-intensive tasks to digital workers, enabling employees to focus on higher-value work
- Dedicated, easily deployed instance tailored to specific customer requirements
- Flexible commercial model that allow the client to scale up and down on AWS to meet dynamic demand, significantly reducing a customer’s total cost of ownership

**Benefits**

**Unlock exponential business value**

- **Increased operational efficiency**
  Improve operations holistically across entire customer journeys and increase company-wide productivity.

- **Maximize return on investment**
  Reduce effort and infrastructure costs while maintaining the highest levels of security, performance and governance.

- **Faster time to value**
  Move at the speed your business demands and maximize limited resources with a digital workforce.

- **Constantly adapt**
  Rapidly scale up to meet demand peaks and adapt to changing business priorities with agility and precision.
Blue Prism Cloud on AWS

Blue Prism Cloud on AWS combines the power of an Intelligent Automation (IA) platform designed to automate and digitize the execution of knowledge-based work with the elasticity, security and reliability customers appreciate from AWS. With the inherent ability to add resources to scale up or down as needed, AWS enables customers to grow their infrastructure as needed, and retract it if there is seasonality associated with their automations. Customers can worry less about security, including unauthorized access, key management and threat detection because AWS continuously monitors and protects accounts so business users can instead focus on the business outcomes of their digital workforce. And with the pillar of AWS reliability, customers can rest assured that local events won’t disrupt the business continuity of their digital automations.

Blue Prism Cloud and AWS used together result in greater workforce optimization, enhanced customer engagement and experience, improved market position, reliability and elasticity which ultimately deliver greater business value, all with peace of mind that the solution is secure.

Automate Processes, easily incorporate AI & machine learning: Blue Prism Cloud on AWS provides no code or low code integration with every available AWS Service, including Amazon artificial intelligence (AI) and machine-learning (ML) services, to give organizations a holistic intelligent automation platform. Blue Prism Cloud also automates how resources are allocated, managed and scaled, while leveraging the security, performance, scale and data retention of AWS. Automations are compliance-ready to meet strict enterprise security and regulatory requirements.

Features

- **Fully hosted and managed intelligent automation platform**
  Support, maintenance, and platform upgrades to ensure 99.9% uptime. Site-to-site VPN to a secure, extensible and scalable platform on AWS.

- **Intelligent digital workers with predictive orchestration**
  AI-enabled digital workers with machine-learning based orchestration to maximize the efficiency and flexibility of process automations, regardless of complexity. Write once and reuse any given process step or connector.

- **End-to-end automation lifecycle and seamless integration**
  Design, develop and manage the end-to-end lifecycle of automations, with no code or low code integration to every available AWS service or third-party software through the SS&C Blue Prism Digital Exchange or AWS Marketplace.

- **Flexible commercial model to meet dynamic demand**
  Burst pricing enables the scaling of digital workers — up and down — to meet dynamic demand.

Common Use Cases

**Finance**
Reduced the mortgage lending processing time of 20-30 minutes per loan. The process is now completely automated – digital workers processes an average of 267 applications per day and return over 100 hours per month to the business. Lenders and homebuyers now get accurate application updates in seconds.

**Healthcare**
Patient records updated in 5 minutes rather than 24 hours during the height of the pandemic. 100% accuracy of record transfers improved patient care and delivered faster results. Freed administrative staff to focus on patients that resulted in a drop in waiting times – saving 15,000 hours per year.

**Energy**
This utility relied on too many labor-intensive tasks and aging infrastructure. Building reports required employees to pull data from multiple systems. Blue Prism Cloud reduced reporting time from 6 days to 2 minutes, which provided access to current, error-free data, and better, faster decision-making.
