Why Sumo Logic?

- Faster release velocity
- Improved reliability and security
- Greater team collaboration
- Deep visibility into the software delivery life cycle
- Unlimited flexibility to use capabilities
- Reduced license waste and penalties
- A platform built for your needs

Product overview

Sumo Logic provides an out of the box AWS Observability solution built from the ground up for AWS management, monitoring, and troubleshooting. Our cloud native, SaaS solution unifies and analyzes logs and metrics at any scale to fill the gaps in observability, allowing teams to operate secure, reliable and efficient systems.

Product features

Cloud Scale
Cloud native, multi tenant architecture processes more than 150 petabytes of data and handles 30 plus million queries daily.

- Performant and reliable Sumo Logic can scale to meet the needs of any size team or organization.

Security Built In
Superb security technologies, rigorous security process, and daily rotated, per customer encryption keys keep your data secure.

- Supports SOC 2 Type 2, PCI DSS 3.2, Privacy Shield, CSA Star and HIPAA certifications.

Powerful Analytics
Make sense of your data and put it to work for you.

- Identify and predict anomalies in real time with outlier detection and uncover root causes using patented pattern analyses.

How it works

Our cloud-native, multi-tenant platform helps you make data-driven decisions and reduces your time to investigate security and operational issues. Sumo Logic provides visibility across key AWS services including EC2, ECS, RDS, ElastiCache, API Gateway, Lambda, DynamoDB, Application ELB, Network ELB and more.

Differentiators

• With the Global Intelligence Service for AWS CloudTrail, enterprises can also benchmark the behavior or their own usage of many of these services against AWS peer user groups to ensure efficiency, detect misconfigurations and security exposure.

• Sumo Logic tags data with the AWS account, region, namespace, and availability zone to provide context and enable users to pivot between critical log and metric data.
What our customers are saying

“Sumo Logic has helped us overcome the proverbial needle in the haystack scenario of tracking down problems in our log data. By providing a centralized and globally searchable platform, Sumo Logic has given us real-time insight on what’s happening with our data. This is a big win for us in terms of value and total cost of ownership.”

- Mark Kelly, Director of Cloud and IA, Scripps Networks Interactive

Data Points

- 208x More frequent code deployments
- 106x Faster lead time from commit to deploy
- 2604x Faster recovering from incidents
- 7x Lower deploying breaking changes
