# Building an intelligent document processing hub at scale at Fannie Mae

**Noah Donaldson**

Sr. Solutions Architect  
AWS

**Daniel Ricardo Holstein**

VP, Technology and Shared Services  
Fannie Mae

# Our mission

To support the customer's mission with solution guidance, architectures, best practices, highly reusable POCs, and solution starters. We work backwards from customer's outcomes and build technical assets to support their mission.

# Document workflow automation

Onboard new document types through low-code no-code (LCNC)

Advanced extraction techniques using Amazon Textract  
Event-driven workflow to trigger downstream process

Customizable and extensible

Intuitive and easy-to-use interface for business users

With document workflow automation, businesses can benefit from a **cost-effective** and **scalable** solution that adapts to their evolving needs, enabling **increased productivity** by allowing employees to focus on more critical tasks while automating routine document processing tasks

# DWA – Onboardings & rules

1.

● Upload Document

○ Configure Settings

○ Review Fields

○ Configure Queries

### Upload Document

The onboarding tool allows you to introduce new document types to our system. For each specific document type, such as the 1099 or 1040 tax forms, the tool configures the system to recognize its structure and content.

Upload a file for onboarding.

Choose file

(PNG, JPEG, TIFF, or PDF)

○ Configure Queries

### Configure Settings

**Pre-Extraction Process**  
Process to run prior to sending document to Textract. See Onboarding Documentation for more information.

Default

**Form Confidence Flag Level**  
If any Key/Value, Query, or Table Row is below this value, this document will be flagged.

50

**Extraction Types**  
Type of extraction to perform. Forms is Key-Value extraction. Queries allows the user to write custom natural language queries. Finally, Tables extracts data from tables in the document.

☒ Forms

☐ Tables

☒ Queries

**Data Parser**  
A process to parse data after data has been extracted from the document.

# Document workflow automation

Ingest	ML-based ingest – can be trained to automatically classify sections of multi-page docs
Onboarding	Onboard new document types through LCNC UI
Extraction	Advanced extraction types (forms, tables, & queries) Customizable extraction process
Validation	Confidence evaluation of extracted data Customizable data validation
Human review	Interact with extracted documents Highlight fields on a document Summarize violations for quick correction
Downstream business process	Event-driven workflow to trigger downstream process

# Fannie Mae

**86<sup>th</sup> year**  
supporting  
homeowners & renters

**\$4 trillion**  
financial institution

**\$369 billion**  
in liquidity  
provided in 2023

Fannie Mae is a leading provider of mortgage  
financing in the US

We purchase mortgages from lenders to free up  
the money they need to make other mortgage loans,  
therefore ensuring the ongoing availability of  
affordable mortgages

# Fannie Mae processes large volumes of documents every year

## By the numbers

Q1 of 2024

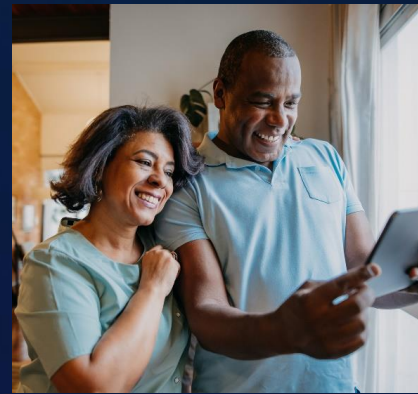

**155,000**  
single-family  
purchase loans  
acquired

**36,000**  
single-family  
refinance loans  
acquired

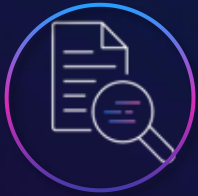

**89,000**  
units of multifamily  
rental housing  
acquired

# Need for automated extraction of data

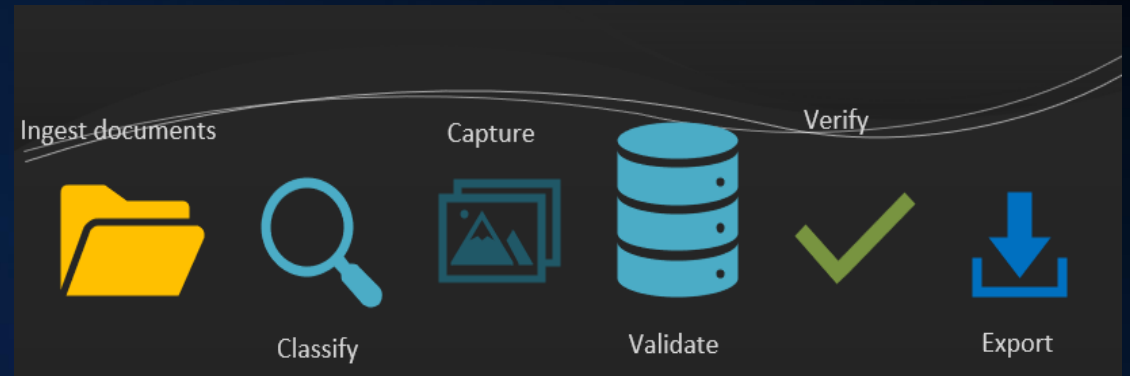

Loan files can be up to 1,000 pages each; examples include HUD1, insurance, appraisal, credit report, payment verification, and more

Manual extraction is a multistep process that is time-consuming and prone to errors

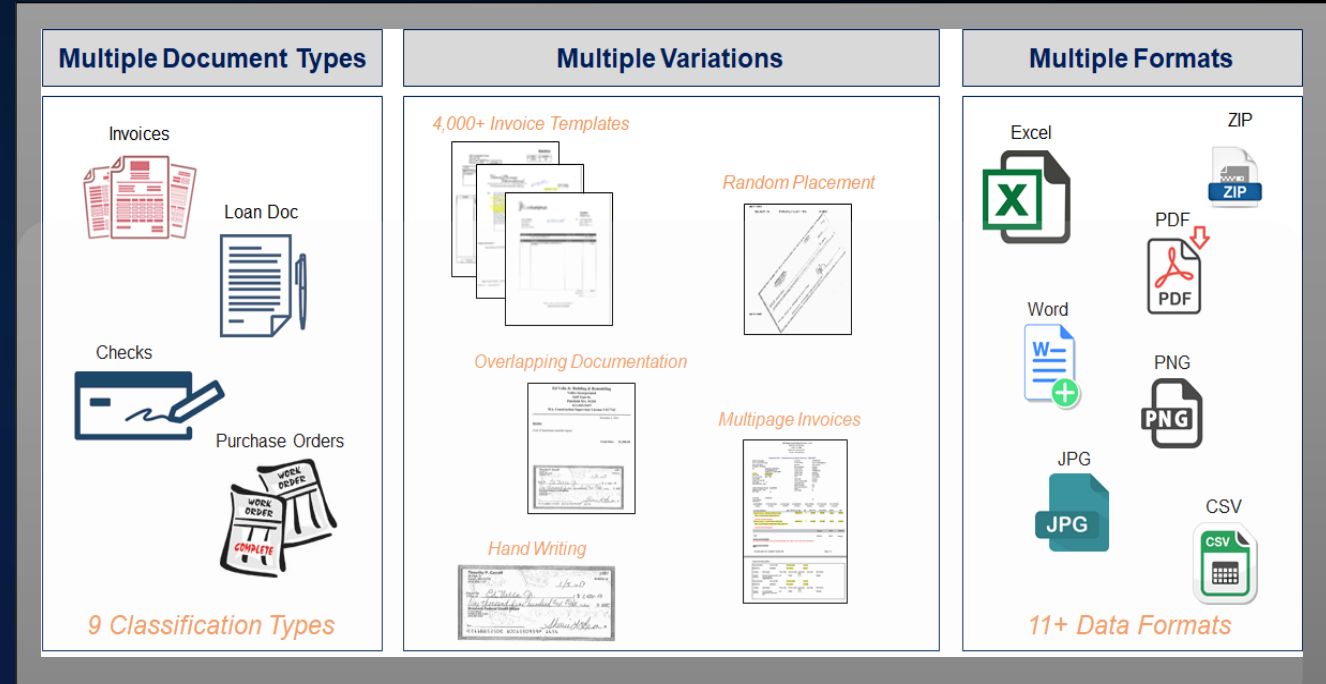

Automation saves thousands of hours of manual extraction and allows for interfacing with upstream and downstream systems

# Challenges with extracting information

## Scenarios

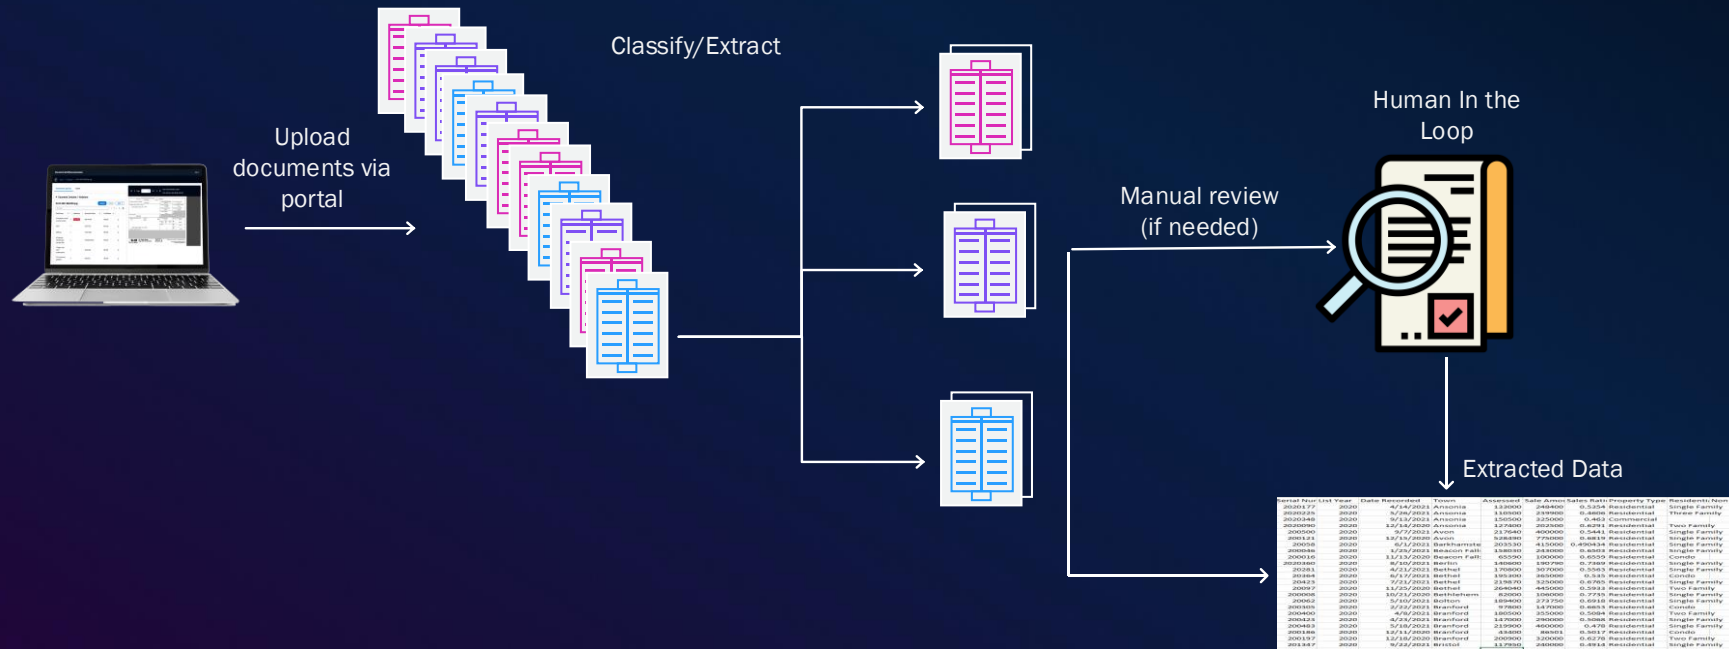

- ✓ Multiple document types within the same batch
- ✓ Format variation within document types
- ✓ Handwritten, unstructured documents
- ✓ Multiple document types within a single document/page
- ✓ Poor-quality documents (faxed, phone images)
- ✓ Identification and extraction of multi-line expenses
- ✓ Old manuscripts

# Our collaboration with AWS

Fannie Mae is working with AWS to enhance their classification, extraction, and orchestration capabilities

-  Users can quickly onboard new document types and obtain extraction results with self-service option
-  We are developing cutting-edge extraction capabilities capable of processing highly unstructured data with option for human review based on confidence levels
-  Fully resilient, serverless architecture

# What's next

An iceberg floating in a blue ocean under a blue sky with clouds. The tip of the iceberg is above the water, and the much larger base is submerged below the surface. The text 'What's next' is in the top left, 'DWA' is to the right of the tip, and three other items are listed to the right of the submerged part.
