

AWS re:Invent

NOV. 28 – DEC. 2, 2022 | LAS VEGAS, NV

NET211-L

Leaping ahead: The power of cloud network innovation

Dave Brown (he/him)

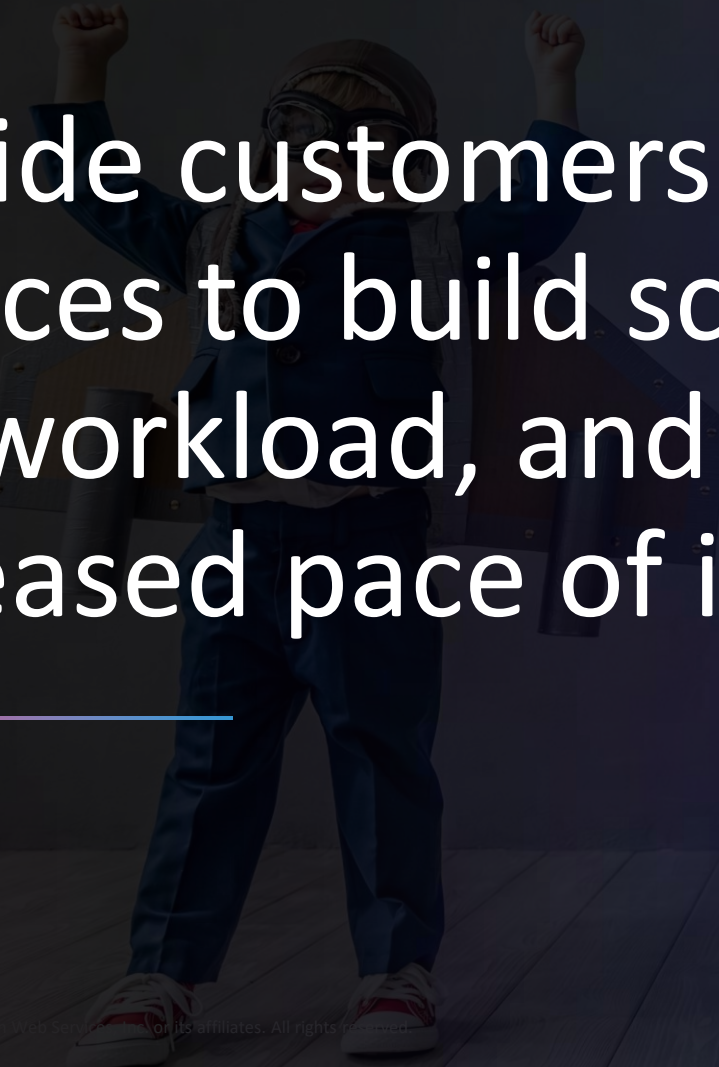

Vice President, Amazon EC2 Networking
AWS

Milena Talavera

SVP of Engineering, Core Infrastructure
Slack

Provide customers with tools and services to build scalable networks, for any workload, and promote an increased pace of innovation

“Through this collaboration with AWS, we will operate not just as a communications services provider, but as a digital services provider harnessing the combined power of 5G connectivity and the cloud.”

Charlie Ergen
Co-founder and Chairman, DISH Wireless

dish wireless

THE POWER OF
CLOUD NETWORK
INNOVATION

Global scale and highest availability

World-class performance

Building large-scale network topologies

Networking for applications

Industry-leading security

Building networks at global scale

THE POWER OF
CLOUD NETWORK
INNOVATION

Global scale and highest availability

World-class performance

Building large-scale network topologies

Networking for applications

Industry leading security

Building networks at global scale

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

REGIONAL EXPANSION

- Available today: 30 Regions
- Coming soon: 5 Regions

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

LOCAL ZONES

- 4 recently launched
- 25 available today
- 27 coming soon

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

EDGE LOCATIONS

- 440+ Amazon CloudFront PoPs
- 115+ AWS Direct Connect locations

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

AWS NETWORK BACKBONE

- Redundant 400 Gbps links
- 245+ countries & territories
- Between all Regions, Local Zones, and edge locations

WHY?

Why build a global backbone?

WHY?

Why have a global backbone network?

SCALABILITY

Improved scalability by controlling network expansion

AVAILABILITY

Improved availability by controlling network redundancy

PERFORMANCE

Improved performance by controlling paths customer traffic traverses

SECURITY

Improved security by ensuring traffic traverses our infrastructure rather than the internet

ALL REGION-TO-REGION TRAFFIC TRAVERSES THE AWS BACKBONE

Why have a global backbone network?

SCALABILITY

Improved scalability by controlling network expansion

AVAILABILITY

Improved availability by controlling network redundancy

PERFORMANCE

Improved performance by controlling paths customer traffic traverses

SECURITY

Improved security by ensuring traffic traverses our infrastructure rather than the internet

ALL REGION-TO-REGION TRAFFIC TRAVERSES THE AWS BACKBONE

Most customers don't think about the AWS network backbone, except if it does not operate flawlessly

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

CHALLENGES IN BUILDING A GLOBAL BACKBONE

PLANNING

Forecasting and deployment systems have to be 5–10 years ahead of growth

COST

Constant innovation ensures that we can build at the needed scale while keeping the cost per GB down

SUPPLY CHAIN

Intense management of the supply chain at the component level to ensure we are never short

PHYSICAL

Doing the work to put the needed fiber in place, whether it crosses the ocean or continent

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

AWS Global Infrastructure

AWS REGIONS, LOCAL ZONES, EDGE LOCATIONS, AND GLOBAL BACKBONE

CUSTOM SOFTWARE

Having complete control over the software in our network lowered costs, improved security, reliability, and performance

CUSTOM HARDWARE

Our experience with Blackfoot helped solidify our plan to invest broadly in custom network hardware

MONITORING & INTELLIGENT ROUTING

MONITORING

Consume billions of metrics every second from every fiber within the network

DETECTION

Fully automated software detects and mitigates normal faults, as well as partial failures

INTERNET

Consume billions of probes across thousands of service providers to route around any internet weather

SELF-HEALING

Traffic routing decision are automated, routing customer traffic around any potential congestion

13

NETWORKING PACKETS WERE LOST WITH THIS FIBER CUT, SINCE OPTICAL FAILOVER WAS USED TO MITIGATE THE IMPACT

ALL REGION-TO-REGION TRAFFIC TRAVERSES THE AWS BACKBONE

Protecting data using encryption

WE PUT SECURITY AT THE CENTER OF EVERYTHING WE DO

CROSS-REGION

Traffic sent between Regions with VPC peering or TGW peering is encrypted by default

BETWEEN INSTANCES

Majority of instance types use the offload capabilities of the Nitro System hardware to automatically encrypt in-transit traffic between instances

TO YOUR DATA CENTER

Use IPsec VPN tunnels or Direct Connect MACsec support to ensure that traffic between AWS and your locations remains protected

APPLICATION TRAFFIC

We make it easy for you to encrypt your application traffic with TLS

Quantum Safe Encryption

PROTECT YOUR DATA IN TRANSIT WITH QUANTUM SAFE CRYPTOGRAPHY

All physical links leaving Amazon-controlled facility encrypted with AES-256 encryption

AES-256 VPC encryption with quantum safe key exchange

Hybrid post-quantum key exchange with AWS KMS

IN THE CLOUD

Instance network bandwidth

NEW!

AVAILABLE NOW

6th Gen EC2 Network-optimized instances

BEST PERFORMANCE IN THE CLOUD FOR HIGH-NETWORKING AND EBS WORKLOADS

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

AVAILABLE NOW

6th Gen EC2 Network-optimized instances

BEST PERFORMANCE IN THE CLOUD FOR HIGH-NETWORKING AND EBS WORKLOADS

UP TO 200 GBPS

First network-optimized instance in the cloud to support 200 Gbps to accelerate data-intensive analytics workloads

UP TO 2X PPS

Scale performance of network virtual appliances, Telco, and in-memory database workloads

EBS OPTIMIZED

Supports up to 80 Gbps of EBS bandwidth to enable high performance file systems, databases, and big data analytics

NEW!

IN PREVIEW

Amazon EC2 C7gn Instances

HIGHEST NETWORK BANDWIDTH FOR EC2 NETWORK-OPTIMIZED INSTANCES

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

IN PREVIEW

Amazon EC2 C7gn Instances

HIGHEST NETWORK BANDWIDTH FOR EC2 NETWORK-OPTIMIZED INSTANCES

HIGHEST NETWORK PERFORMANCE

Scale data-intensive workloads with 200 Gbps of bandwidth and 2x higher throughput per vCPU compared to current C6gn instances

HIGHEST PPS PERFORMANCE

The new Nitro v5 card enables the highest packet processing performance across network-optimized instances to scale network virtual appliances

LATEST GRAVITON3 PROCESSORS

Up to 25% better compute performance and up to 2x faster performance for cryptographic workloads compared to Graviton2 instances

Traditional TCP routing does not effectively use all available network capacity, leading to network congestion

Scalable Reliable Datagram (SRD)

LOW LATENCY FOR NETWORK-INTENSIVE APPLICATIONS

ETHERNET-BASED PROTOCOL

SRD leverages the massive investment that AWS has in Ethernet-based connectivity

NEGATES IN-ORDER PACKET DELIVERY

Packets are sent over all possible pathways in the fabric at once

ELASTIC FABRIC ADAPTER

Underlying protocol supporting EFA for network-intensive applications

USED BY

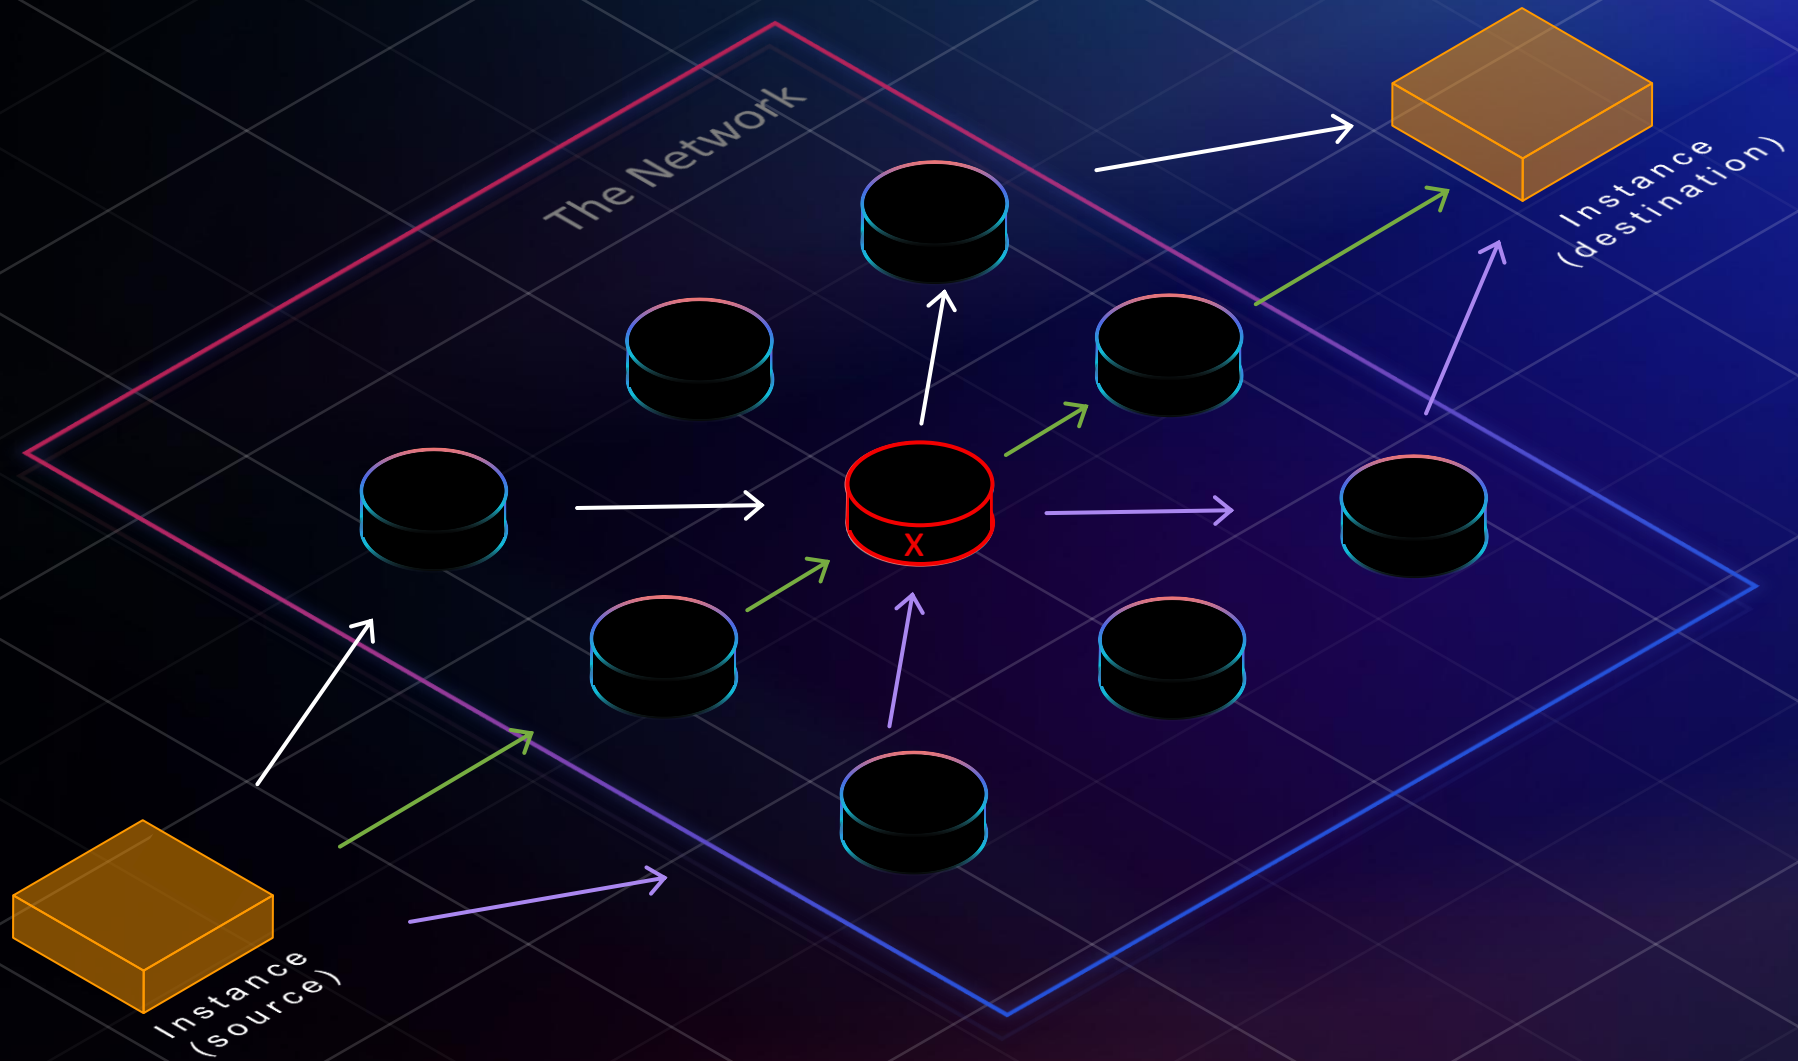

ELASTIC FABRIC ADAPTER
Low latency and high throughput for High Performance Computing workloads

AMAZON EBS
IO2 Block Express volumes, delivering up to 4x higher throughput, IOPs, and capacity

Traditional TCP Routing

Scalable Reliable Datagram (SRD) Routing

NEW!

AVAILABLE NOW

Announcing ENA Express

INCREASED THROUGHPUT WITH LOWER TAIL LATENCY

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

AVAILABLE NOW

Announcing ENA Express

INCREASED THROUGHPUT WITH LOWER TAIL LATENCY

SIMPLE

Enable for network traffic between EC2 instances with a single API call

TRANSPARENT

Use TCP/UDP for your application and the SRD encapsulation will be done by the network

PERFORMANCE

Reduces p99 network latency by up to 50%, and p99.9 latency by up to 85%. Single flow throughput up to 25 Gbps.

AVAILABLE AT NO ADDITIONAL COST

NEW!

AVAILABLE NOW

Announcing ENA Express

INCREASED THROUGHPUT WITH LOWER TAIL LATENCY

25Gbps

5X INCREASE IN
BANDWIDTH

Up to 25 Gbps of single
flow bandwidth – up
from 5 Gbps

50%

LOWER P99
LATENCY

ENA Express reduces p99
network latency by up to
50%

85%

LOWER P99.9
LATENCY

ENA Express reduces p99.9
network latency by up to
85%

AVAILABLE AT NO ADDITIONAL COST

THE POWER OF CLOUD NETWORK INNOVATION

Global scale and highest availability

World-class performance

Building large-scale network topologies

Networking for applications

Industry leading security

Building networks at global scale

A D M I N I S T R A T O R

Wants stricter control to ensure that only approved entities are communicating on the network

Wants to enforce proper identity and authentication – often limits compute platforms to achieve this

Wants control of network and ability to monitor and audit all traffic flows within the network

D E V E L O P E R

Wants to connect applications without worrying about the VPC or account boundaries

Wants to use the right compute platform with integrated support for identity and authentication

Wants application logs, but not overly concerned with controlling, monitoring, or auditing network flows

C O N N E C T I V I T Y

S E C U R I T Y
