

The background features a complex, abstract pattern of overlapping, curved lines in various shades of blue, purple, and teal. The lines create a sense of depth and movement, resembling a stylized architectural or data visualization. The overall color palette is cool and modern.

# Automating security and compliance with OSCAL

Dr. Michaela Iorga

OSCAL Strategic Outreach Director  
National Institute of Standards and  
Technology

Matthew Donkin

Information Assurance Manager, U.S.  
Government Security & Compliance  
AWS

Amber Pearson (she/her)

Head of U.S. Security Engagement, U.S.  
Government Security & Compliance  
AWS

**NIST**

**Open security controls  
assessment language  
(OSCAL)**

# Background

- ❑ From do-it-yourself IT systems to convenient cloud services (utility model)
- ❑ New trust model evolved
  - Security automation was key

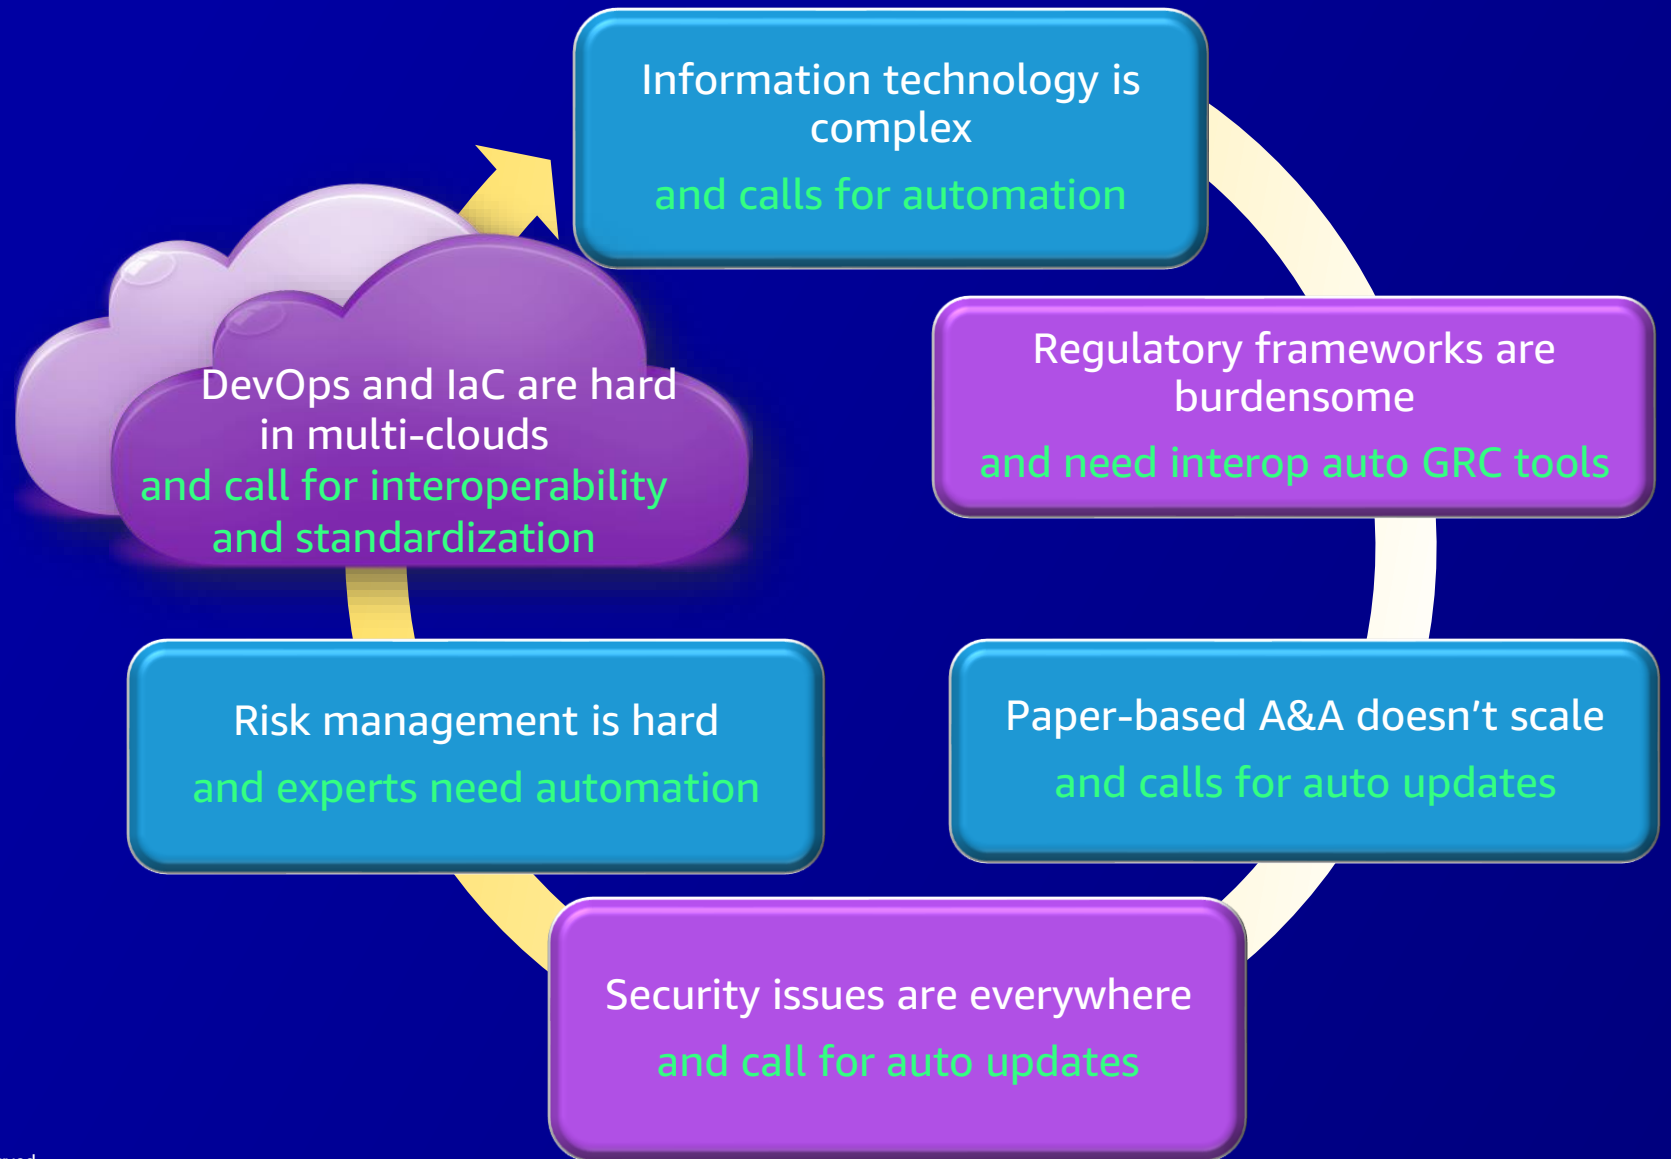

# Why are we all here today?

Before the audit

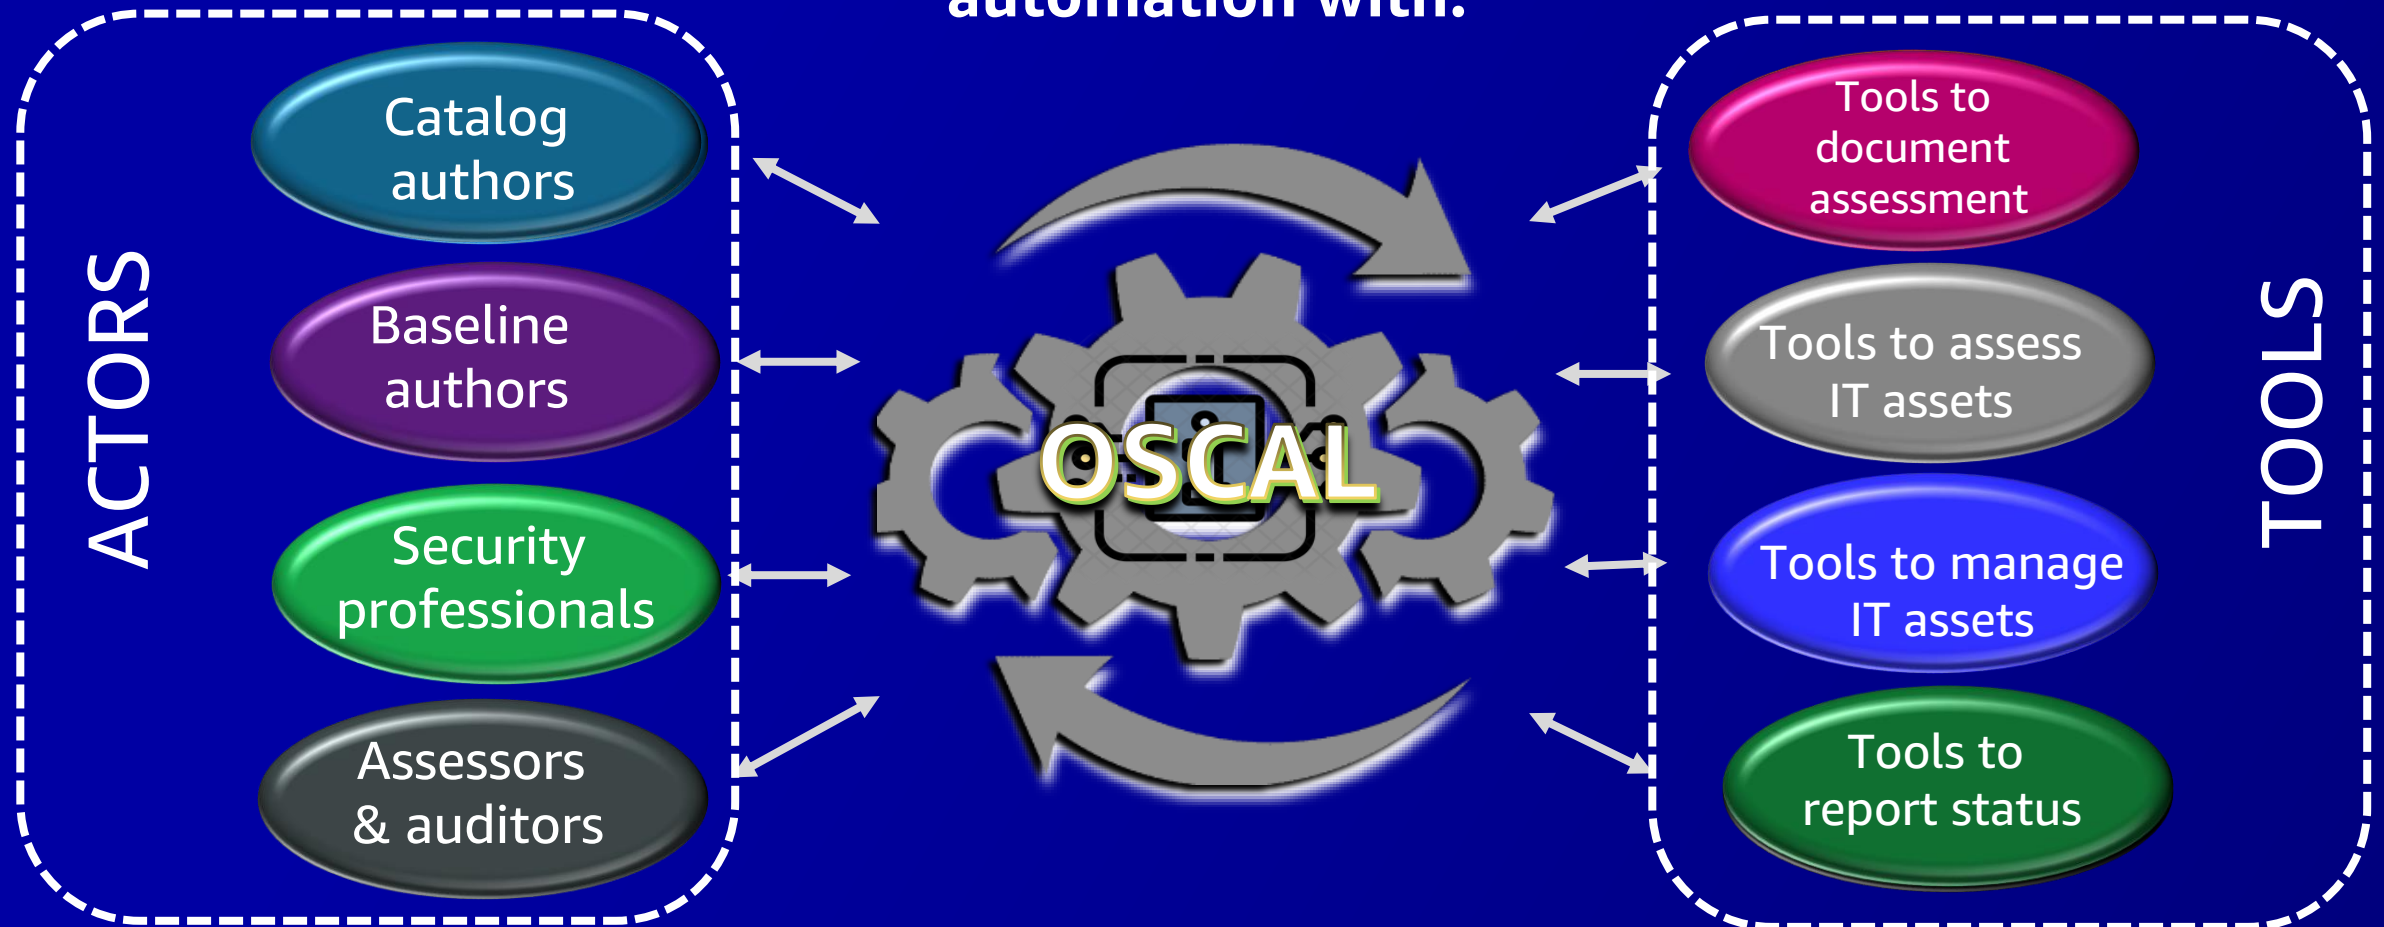

During the audit

After the audit

# What was needed?

A machine-readable **cyber Esperanto** that enables **TOOLS**, **ACTORS**, and **ORGANIZATIONS** to exchange information via automation with:

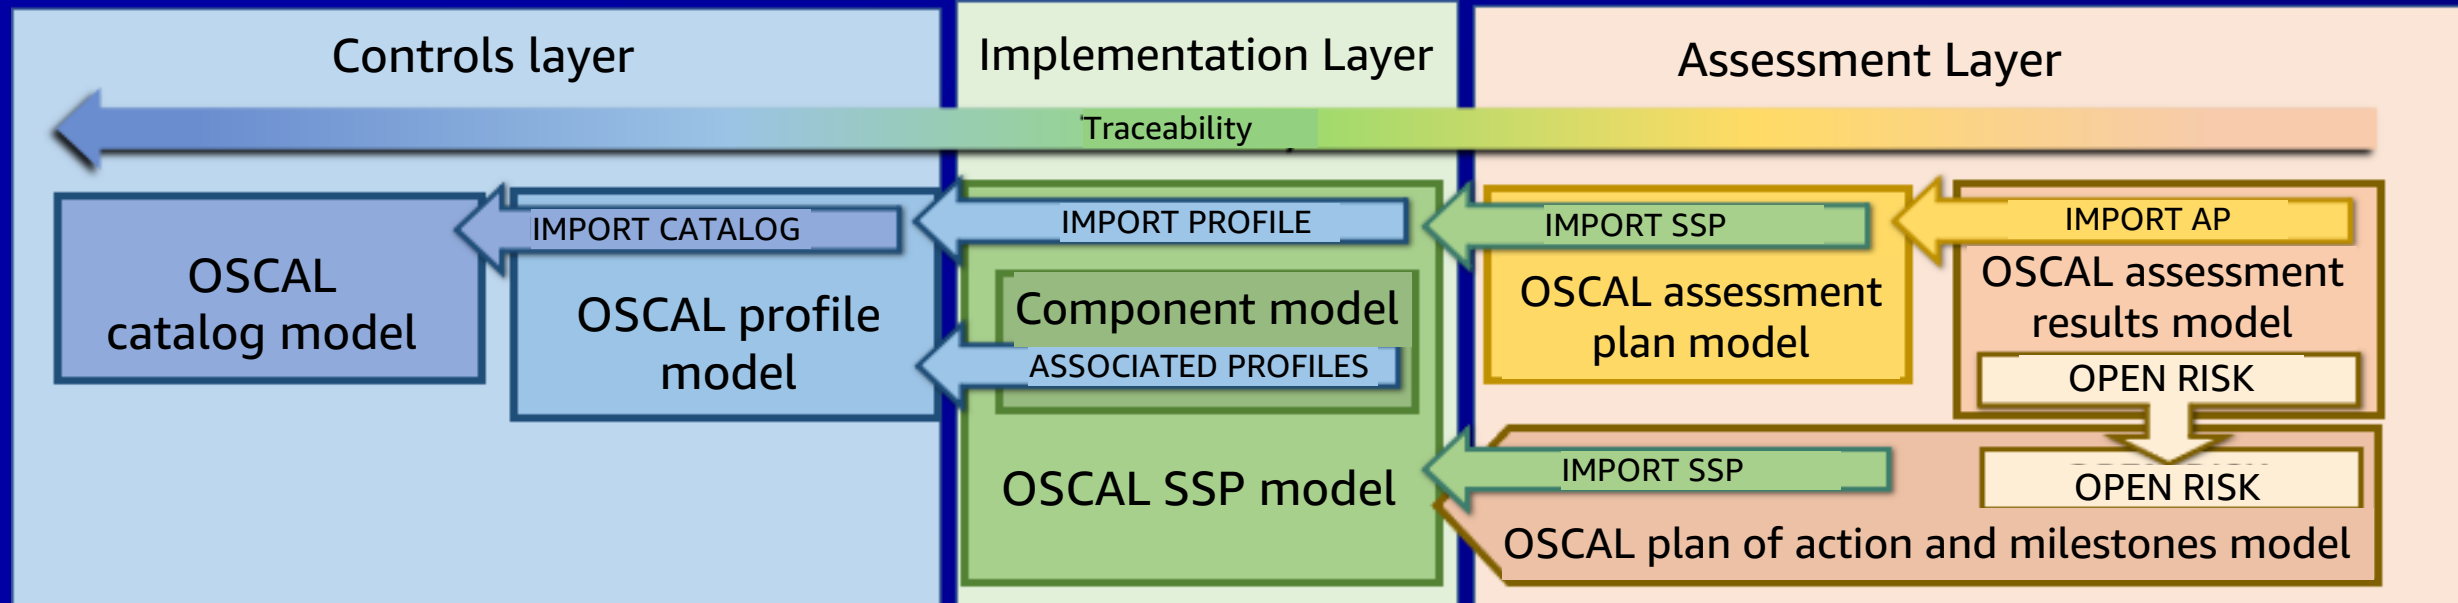

**OSCAL sets the foundation for interoperable security automation**

# What is OSCAL?

## OSCAL is the result of NIST and FedRAMP collaboration

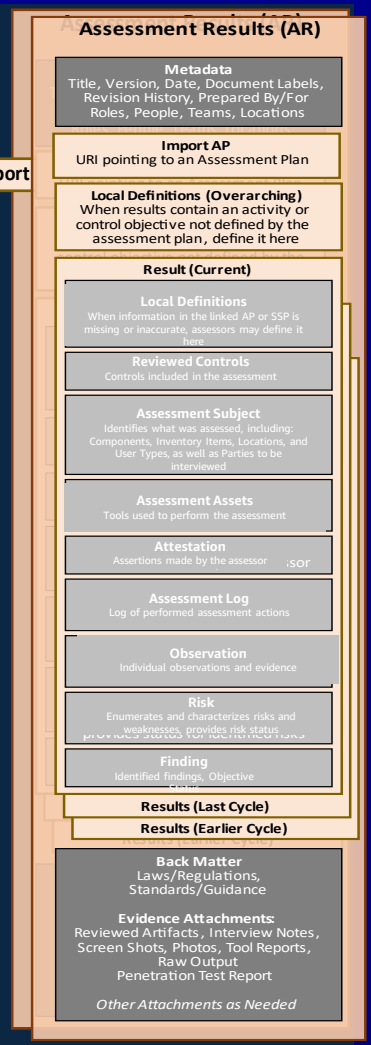

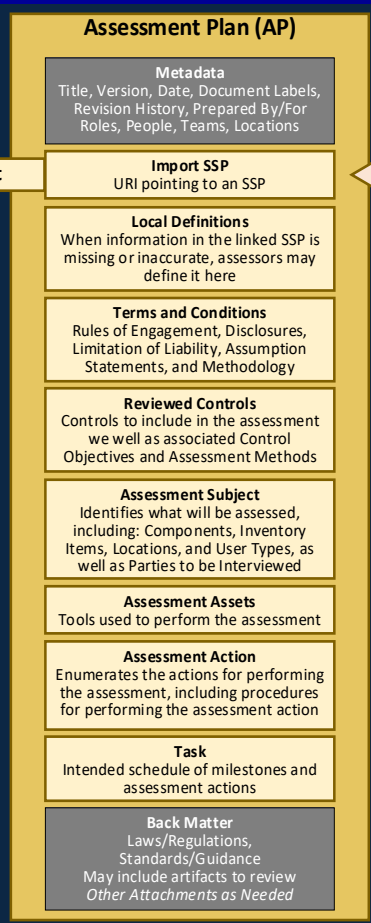

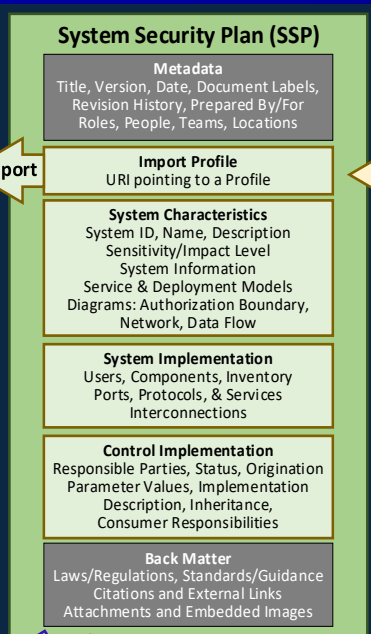

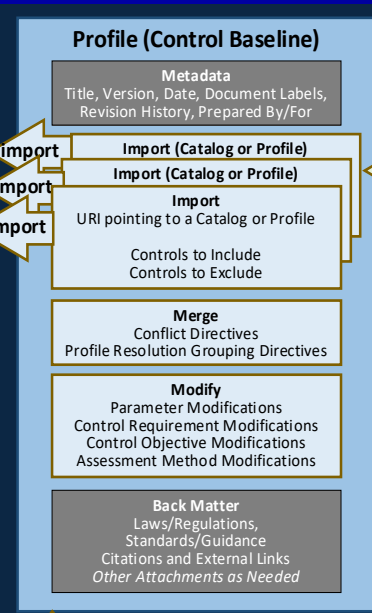

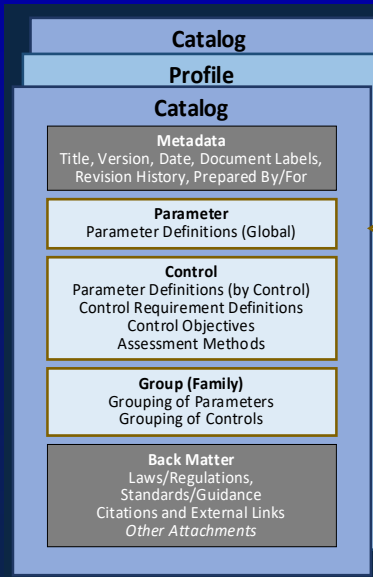

- **OSCAL provides** a common/single machine-readable *language*, expressed in XML, JSON and YAML for:
  - ❑ Multiple compliance and risk management frameworks (e.g., SP 800-53, ISO/IEC 27001&2, COBIT 5)
  - ❑ Software and service providers to express implementation guidance against security controls (component definition)
  - ❑ Sharing how security controls are implemented (system security plans [SSPs])
  - ❑ Sharing security assessment plans (system assessment plans [SAPs] )
  - ❑ Sharing security assessment results/reports (system assessment results [SARs])
- **OSCAL enables** automated traceability from selection of security controls through implementation and assessment

# A closer look at OSCAL models

# OSCAL v1 release

OSCAL 1.0.0 was released on  
June 7, 2021

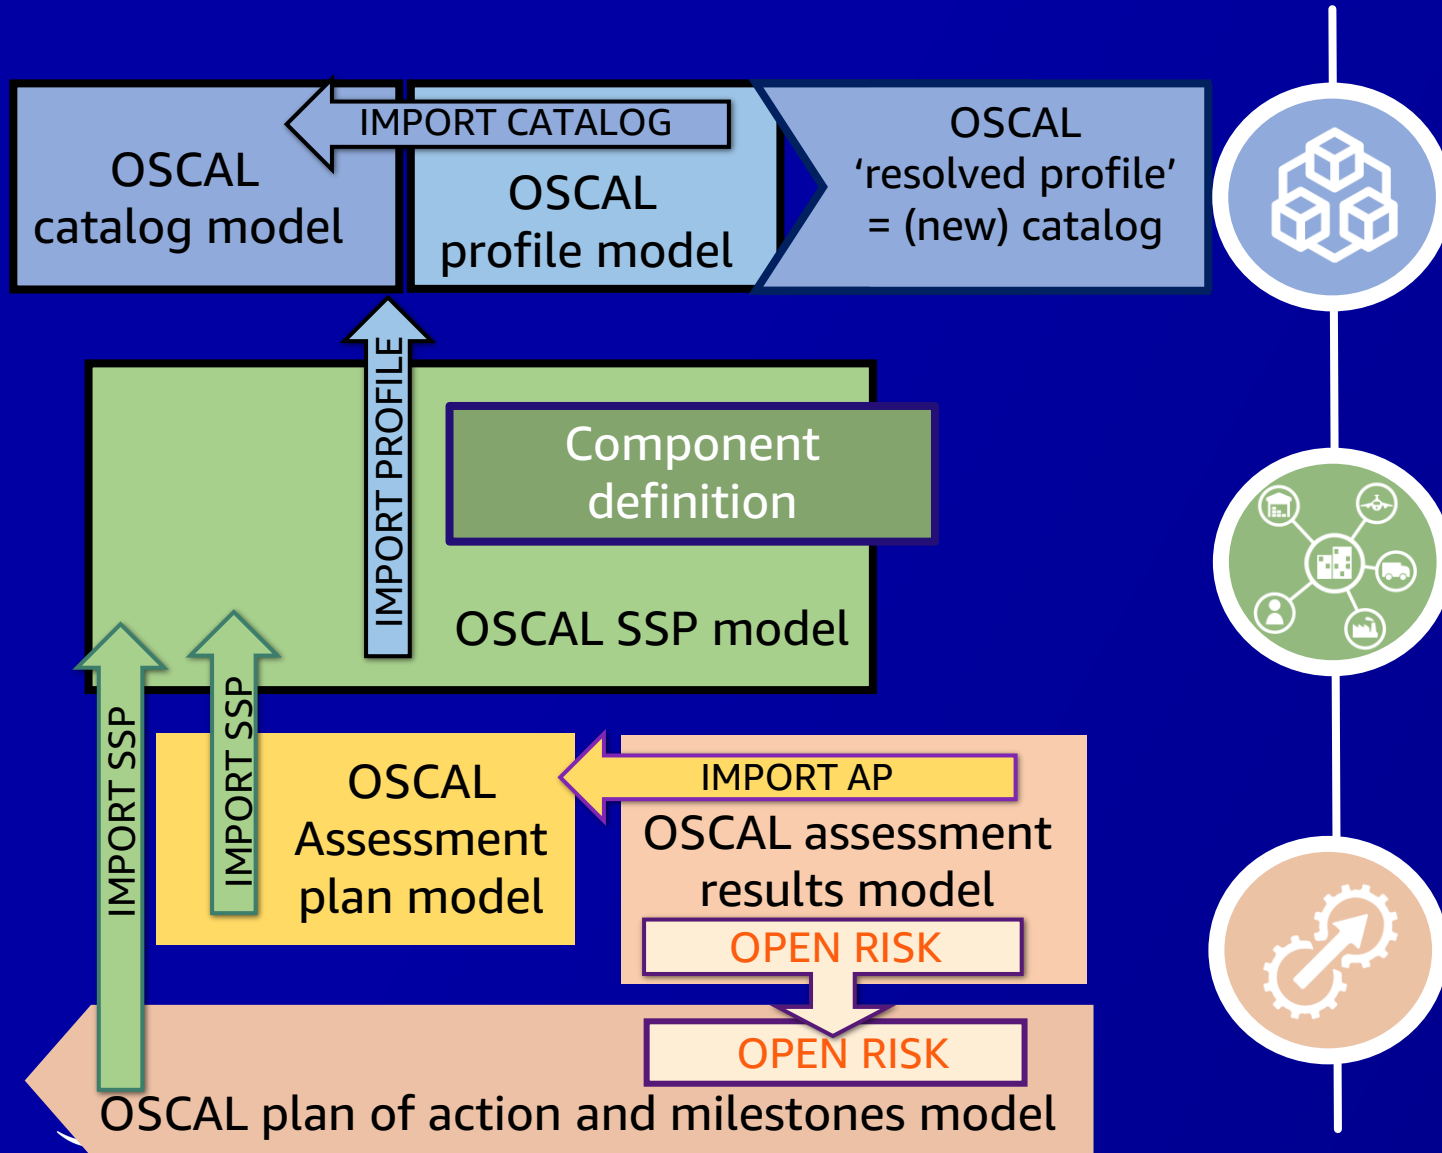

<https://github.com/usnistgov/OSCAL/releases/tag/v1.0.0>

*“...First official, major release of OSCAL provides a stable OSCAL 1.0.0 for wide-scale implementation ...”*

NIST, GitHub, <https://bit.ly/3J12F7z>

# How is OSCAL different?

- No information needs duplication
- Custom granularity (controls can be decomposed into statements)
- Unique identifiers for parameters and statements

- Vendors can document their products
- Systems' security implementation can be decomposed

- Capture assessment plans and activities with custom cadence, and only for selected components
- POA&M conveys open risks aligned with the SSP capabilities and controls

# OSCAL models > OSCAL content < OSCAL tools

# OSCAL: the Open Security Controls Assessment Language

Learn More Tutorials Tools Documentation Downloads Contribute Contact Us

## Automated Control-Based Assessment

Supporting Control-Based Risk Management with Standardized Formats

[Learn More](#)

**Providing control-related information in machine-readable formats.**

NIST, in collaboration with industry, is developing the Open Security Controls Assessment Language (OSCAL) of formats expressed in XML, JSON, and YAML. These formats provide machine-readable representations of control baselines, system security plans, and assessment plans and results.

# Open-source tools and libraries

<https://pages.nist.gov/OSCAL/tools/#open-source-tools-and-libraries>

	Provider/Developer	Description	Type
<a href="#">Compliance trestle</a>	IBM	A python SDK and command line tool which manipulates OSCAL structures and supports transformation of data into OSCAL.	open source
<a href="#">OSCAL Java Library</a>	NIST OSCAL Project	A Java-based programming API for reading and writing content conformant to the OSCAL XML, JSON, and YAML based models.	open source
<a href="#">OSCAL React Component Library</a>	Easy Dynamics	A library of reusable React components and an <a href="#">example user interface application</a> that provides a direct UI into OSCAL.	open source
<a href="#">OSCAL REST API</a>	Easy Dynamics	An initial OpenAPI definition of an OSCAL REST API that describes how systems might manipulate catalogs, profiles, components, and SSPs.	open source
<a href="#">XSLT Tooling</a>	NIST OSCAL Project	A variety of Extensible Stylesheet Language (XSL) Transformations (XSLT), Cascading Style Sheets (CSS), and related utilities for authoring, converting, and publishing OSCAL content in various forms.	open source
<a href="#">XML Jelly Sandwich</a>	Wendell Piez (NIST)	Interactive XSLT in the browser includes <a href="#">OSCAL demonstrations</a> .	open source
<a href="#">Xacta 360</a>	Telos	Xacta 360 is a cyber risk management and compliance analytics platform that enables users to create and submit FedRAMP system security plans (SSPs) in OSCAL format. Future OSCAL capabilities are forthcoming as the standard evolves.	<a href="#">license</a>
<a href="#">Atlasity: Continuous Compliance Automation</a>	C2 Labs	Atlasity CE (release 2.0) runs in any environment and supports the development of OSCAL v1.0 content for Catalogs, Profiles, System Security Plans and Components. Additional detail can be found in this blog post: <a href="#">Atlasity Delivers Free Tools to Create OSCAL Content</a> .	community edition
<a href="#">control_freak</a>	Risk Redux	This tool seeks to provide folks with a searchable and easy-to-navigate reference for NIST SP 800-53 Revision 5. It is <a href="#">an open-source application from the Risk Redux project</a> , built using parsed content directly from the OSCAL repositories.	open-source

# How to contribute?

OSCAL is a community-driven effort.  
Your participation directly impacts OSCAL's success!

Contact us at: [oscal@nist.gov](mailto:oscal@nist.gov)

Chat with us on Gitter:

<https://gitter.im/usnistgov-OSCAL/Lobby>

- ❑ Integrate support for OSCAL in your tools
- ❑ Implement OSCAL-based tools in your enterprise

## ❑ In GitHub

Contribute to the development of OSCAL:  
<https://github.com/usnistgov/OSCAL>

- ❑ Attend the biweekly community meetings hosted by NIST

<https://pages.nist.gov/OSCAL/contribute/#community-meetings>

# A few OSCAL adopters

- FedRAMP
- Noblis
- HHS CMS
- National Renewable Energy Lab
- GovReady
- C2 Labs
- cFocus Software
- Shujinko
- Robers Bosch (EU | Germany)
- Telos
- KPMG
- IBM Research

2021 presenters

- AWS
- CSAM
- Easy Dymatics
- Volant Associates LLC
- Secureframe
- Red Hat
- Nirmata
- SunStone Secure

2022 new presenters

- US Air Force Platform One
- Booz Allen Hamilton
- eMASS
- Microsoft
- Coalfire
- Kratos
- Salesforce
- Oracle

2021-2022 other adopters

Booz | Allen | Hamilton®

# **AWS OSCAL implementation, successes and challenges**

# Documentation challenge

- **System security plan (SSP)**
  - 2 SSPs
  - 12 monthly updates
  - 1 annual assessment
  - GovCloud SSP is **735** pages
- **Customer responsibility matrix (CRM) and customer configuration guides (CCG)**
  - 24 monthly updates per year
  - **27,123** projected 2022 downloads
- **Total customer document downloads for 2021: 34,763**

# OSCAL implementation

- **Xacta (Telos) governance, risk management and compliance (GRC) tool**
  - Provides **multiple classification** levels of OSCAL formatted authorization packages
- **OSCAL template**
  - FedRAMP GitHub:

# OSCAL benefits to AWS customers

- **Current process**
  - Request access to digital rights management solution
  - Manually copy requisite security documentation into GRC
  - Manually update documentation on a monthly basis
  - Estimated **4,160** workforce hours per year to create and maintain ATO package
- **OSCAL simplification**
  - Request access to file repository
  - Download OSCAL format authorization package
  - Upload into OSCAL enabled GRC solution
  - Estimated **20-40** workforce hours per year to create and maintain ATO package
- **Streamline system authorization to operate (ATO) process**
  - Introduction of **machine-readable** representations of control catalogs, control baselines, system security plans, and assessment plans and results

# OSCAL successes

- **AWS, in collaboration with Telos, was the first CSP to provide an OSCAL SSP to FedRAMP**
- **Able to provide feedback to industry partners to improve FedRAMP OSCAL template**
- **Partner with Accenture (3PAO) to provide a complete OSCAL authorization package by November 2022**
  - SAP
  - SAR

# OSCAL authorization package timeline

- **System security plan (SSP)**
  - Status: Complete
- **Security assessment plan (SAP)**
  - Status: In progress
  - EDC: Q4 2022
- **Security assessment report (SAR)**
  - Status: In progress
  - ECD: Q4 2022
- **Plan of action and milestones (POA&M)**
  - Status: In progress
  - ECD: Q4 2022

# OSCAL challenges

- **OSCAL SSP outputs verifying through NIST, but not on FedRAMP tools**
  - Different templates are causing issues with standardization
- **Erroneous information requirements that are not applicable to hyper-scaling CSPs**
  - How many users at any one time on the cloud
  - Role of each individual working within the environment
- **Aligning all information correctly from various documentation types**
  - SSPs are written differently and have appendices
  - Plans of action and milestones (POA&M) are written with various levels of information
  - Ensuring all pertinent data is in the correct layout for the OSCAL export

# Automation of security authorization

# Solutioning with customer obsession

AWS is working backwards from customers by addressing the problems of customers that have been federally regulated and by capturing the voices of customers.

These experiences and insights support AWS's customer obsession for solving customer friction points in the realm of security compliance, governance, and authorization.

# Automating compliance solutions

## Industry problem

- Constant technological innovation and protection requirements
- Evolving governance guidance that impacts the authorization process
- Determining exploitability and clarifying risk

## Automation objective

- Deliver compliance solutions that keep pace with the speed of business
- Streamline security documentation for shared responsibility, inheritance model and interconnections
- Standardize schema to encourage industry clarity and adoption

# Driving automation forward

- **AWS actualizes conceptual models**

- Invent and simplify within the security compliance industry
- Convert authorization documents into machine readable artifacts
- Develop APIs between GRC tools

- **Global adoption**

- Expansion to other frameworks (ISO 27001/2, NIST 800-53 Rev5, COBIT 5)
- Current global interests

Australia

Israel

New Zealand

United Kingdom

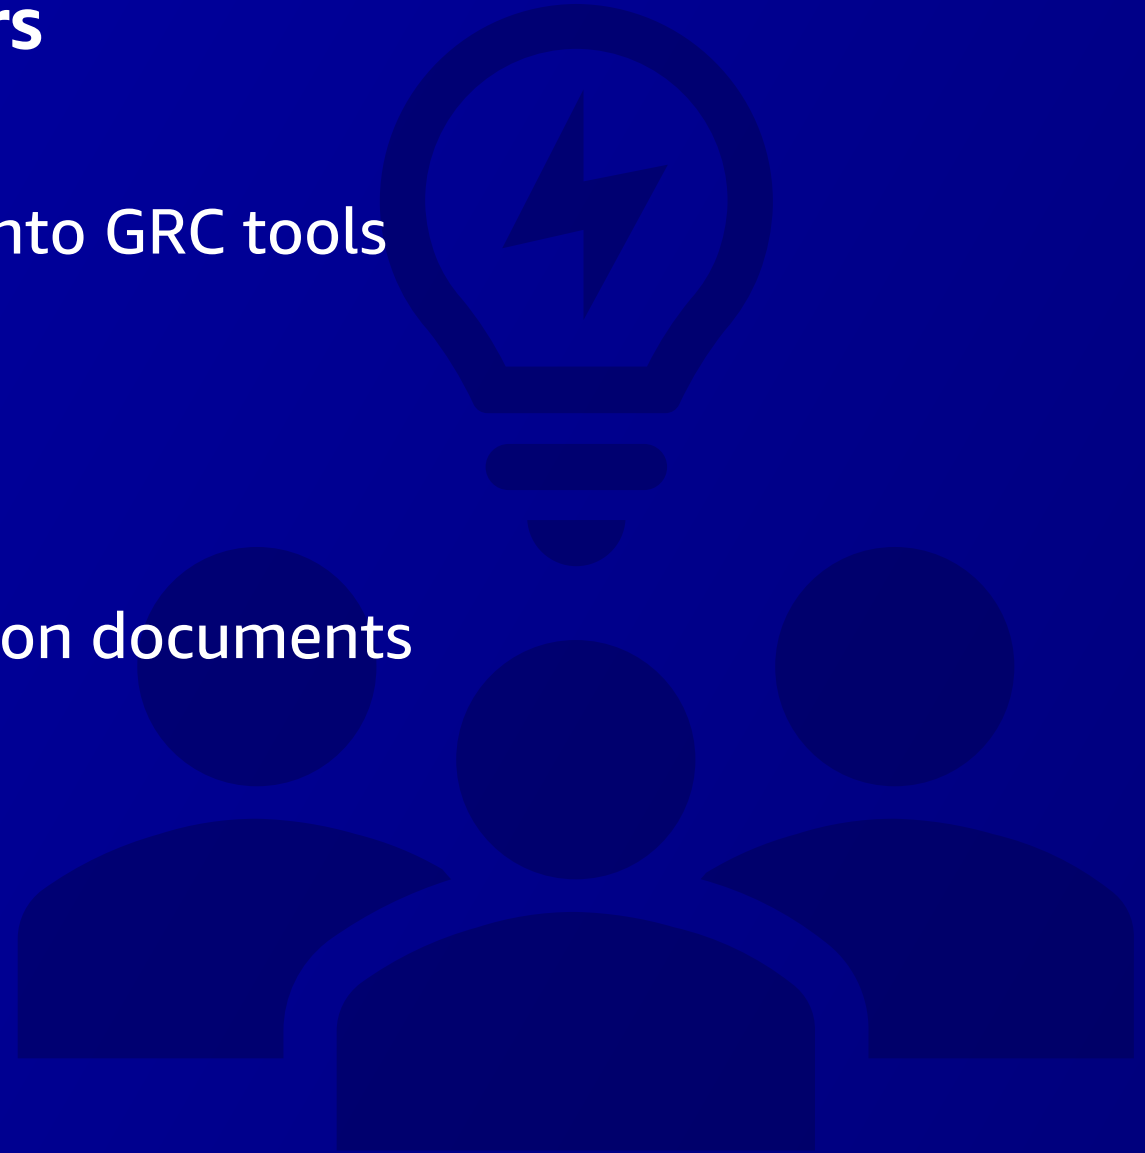

# Call to industry

- **Collaboration with industry partners**

- Automation progress and challenges
- Ingestion of machine readable artifacts into GRC tools
- Template granularity and consistency

- **AWS security automation summit**

- Benefits of machine readable authorization documents
- Increase adoption globally
- Formalize templates

# Transformation of security authorization

- Enhance customer authorization process through policy as code
- Drive towards zero-trust tailored controls rather than framework controls
- Provide prescriptive security controls that are automatically enforceable and measurable
- Deliver compliance automation to gain protection of cyberspace

**“Learning and innovation go hand in hand. The arrogance of success is to think that what you did yesterday will be sufficient for tomorrow.”**

**William Pollard**

Physicist
