

The background of the image is a vibrant blue with a complex, abstract pattern of overlapping, curved lines that create a sense of depth and movement. The lines are in various shades of blue and purple, creating a dynamic, almost architectural feel. The overall composition is modern and tech-oriented.

AWS re:Inforce

Agenda

Overview of service control policies (SCPs)

Using SCPs effectively

Getting the most out of your SCPs

Our top 5 recommended SCPs

Morgan Stanley AWS organization/SCP evolution

Lessons learned

Use cases

Overview of SCPs

Set preventive guardrails with SCPs

SCPs

- Act as preventive guardrails for principals in your organization (including root user)
- Are used to enforce security invariants

 = SCP

SCPs define maximum allowable permissions

* SCPs only affect principals within your AWS Organizations organization

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

SCPs apply to your principals

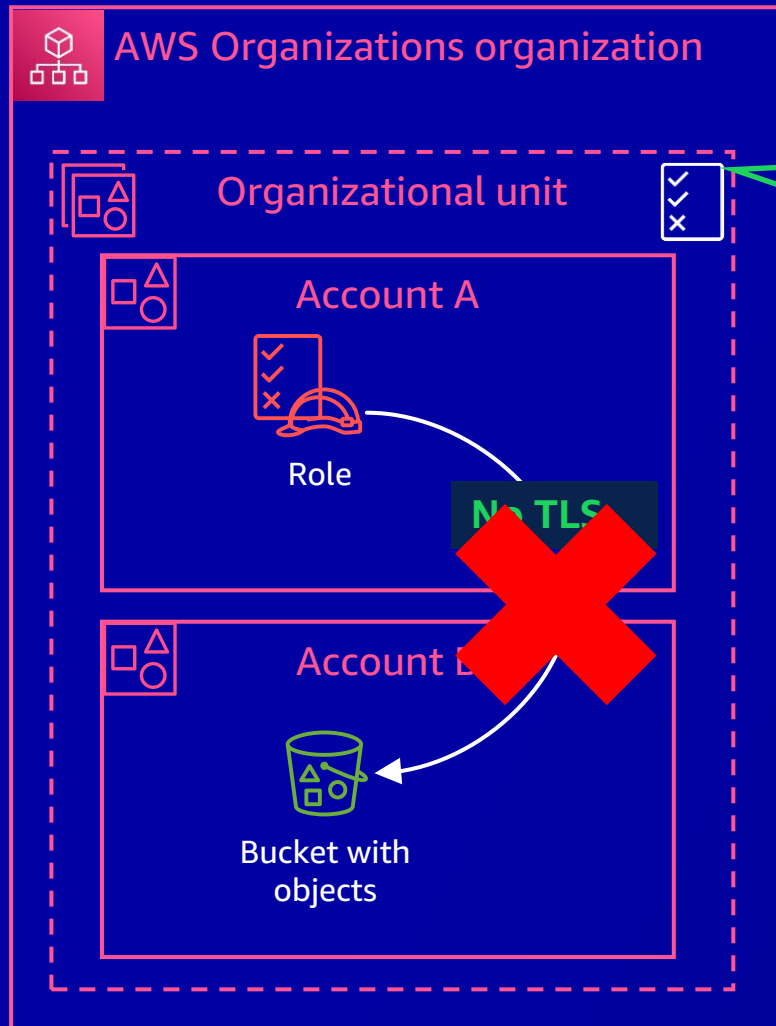

... AND ONLY YOUR PRINCIPALS

```
"Effect": "Deny",  
"Action": "s3:*",  
"Resource": "*",  
"Condition" : {  
  "Bool" : {  
    "aws:SecureTransport": "false"  
  }  
}
```

SCPs apply to your principals

... AND ONLY YOUR PRINCIPALS

```
"Effect": "Deny",
"Action": "s3:*",
"Resource": "*",
"Condition": {
  "Bool": {
    "aws:SecureTransport": "false"
  }
}
```

SCPs apply to your principals

... AND ONLY YOUR PRINCIPALS

```
"Effect": "Deny",
"Action": "s3:*",
"Resource": "*",
"Condition" : {
  "Bool" : {
    "aws:SecureTransport": "false"
  }
}
```

SCPs apply to your principals

... AND ONLY YOUR PRINCIPALS

```
"Effect": "Allow",
"Principal": {
  "AWS": "arn:aws:iam:ExternalAccount:role/RoleC"
},
"Action": "s3:*",
"Resource": [
  "arn:aws:s3:::workload-B-Bucket/*",
  "arn:aws:s3:::workload-B-Bucket"
]
```

Account outside of
your organization

SCPs apply to your principals

... AND ONLY YOUR PRINCIPALS

```
"Effect": "Allow",  
"Action": "s3:*",  
"Resource": [  
    "arn:aws:s3:::workload-B-Bucket/*",  
    "arn:aws:s3:::workload-B-Bucket"  
]
```

SCPs apply to your principals

... AND ONLY YOUR PRINCIPALS

SCPs apply to your principals

... AND ONLY YOUR PRINCIPALS

Allowed

No TLS

Restrict external principals using **resource policy**

```
"Effect": "Deny",
"Principal": "*",
"Action": "s3:*",
"Resource": [
    "arn:aws:s3:::workload-B-Bucket/*",
    "arn:aws:s3:::workload-B-Bucket"
],
"Condition": {
    "Bool": {
        "aws:SecureTransport": "false"
    }
}
```

SCPs affect principals in your organization

Using SCPs effectively

Use the right **guardrail** for the right controls

Use the right **guardrail** for the right controls

Use the right **guardrail** for the right controls

Getting the most out of your SCPs

Get the **most out** of your **SCPs**

Inheritance

Combine policies

Compact policy

Take advantage of inheritance for Deny

Take advantage of inheritance for Deny

```
{  
  "Version": "2012-10-17",  
  "Statement": [  
    {  
      "Sid": "ApprovedServicesOnly",  
      "Effect": "Deny",  
      "Action": [  
        "robomaker:*",  
        "iot: *" ]  
    }  
  ],  
  "Resource": "*" }  
}
```

Take advantage of inheritance for Deny

```
{  
  "Version": "2012-10-17",  
  "Statement": [  
    {  
      "Sid": "Serverlessonly",  
      "Effect": "Deny",  
      "Action": "ec2:RunInstances",  
      "Resource": "*"   
    }  
  ]  
}
```

Take advantage of inheritance for Deny

```
"Effect": "Deny",  
  "Action": [  
    "robomaker:*",  
    "iot: *",  
    "ec2:RunInstances"  
  ],  
  "Resource": "*"
```

Combine policies

MAXIMUM NUMBER YOU CAN ATTACH TO A ROOT, OU, OR ACCOUNT – 5

AWS full access policy [143 bytes]

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": "*",
      "Resource": "*"
    }
  ]
}
```

Deny bucket deletion and AWS Security Hub disablement [260 bytes]

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Deny",
      "Action": "s3:DeleteBucket",
      "Resource": "*"
    },
    {
      "Effect": "Deny",
      "Action": "securityhub:Disable*",
      "Resource": "*"
    }
  ]
}
```

Combined policy [274 bytes]

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": "*",
      "Resource": "*"
    },
    {
      "Effect": "Deny",
      "Action": [
        "s3:DeleteBucket",
        "securityhub:Disable*"
      ],
      "Resource": "*"
    }
  ]
}
```

Compact your policy

MAXIMUM SIZE OF POLICIES – 5,120 BYTES

**Use AWS
Management
Console**

**Remove
white spaces**

```
{  
  "Version": "2012-10-17",  
  "Statement": [  
    {  
      "Sid": "PolicyID",
```

Shorten "Sid"

Our top 5 SCP recommendations

Prevent leaving the organization

```
{
  "version": "2012-10-17",
  "statement": [
    {
      "effect": "Deny",
      "action": [
        "organizations:LeaveOrganization"
      ],
      "resource": "*"
    }
  ]
}
```

Why?

- Centrally **secure and audit** your environment across accounts
- Simplify **permission management** and **access control**
- Manage **costs** and **optimize usage**

Only allow usage of approved AWS Regions

```
"Effect": "Deny",
"NotAction": [
  "organizations:*",
  "iam:*",
  "budget:*"
  ...
],
"Resource": "*",
"Condition": {
  "StringNotEquals": {
    "aws:RequestedRegion": [
      "eu-west-1",
      "eu-central-1"
    ]
  }
}
```

Policy highlights

- Use **aws:RequestedRegion** condition key to specify allowed Regions with **StringNotEquals** operator
- Use **NotAction** element to create exemptions to the policy, such as global service endpoint

Prevent usage of the root user

```
"Effect": "Deny",
"Action": "*",
"Resource": "*",
"Condition": {
  "StringLike": {
    "aws:PrincipalArn": [
      "arn:aws:iam::*:root"
    ]
  }
}
```

Policy highlights

- Deny all actions¹ by the root user in member accounts
- Use **aws:PrincipalArn** condition key for root user with wildcard ("*****") for account-id
- Create process for temporary exceptions using the **aws:PrincipalAccount** condition key

¹ Tasks that require root user: amzn.to/2VLTB2p

Prevent disabling security services

AWS CloudTrail

```
"cloudtrail:DeleteTrail"  
"cloudtrail:PutEventSelectors"  
"cloudtrail:StopLogging"  
"cloudtrail:UpdateTrail"
```

AWS Config

```
"config:DeleteConfiguration"  
"config:DeleteDeliveryChannel"  
"config:DeleteRetention"  
"config:PutConfiguration"  
"config:PutDeliveryChannel"  
"config:PutRetention"  
"config:StopConfiguration"
```

AWS Security Hub

```
"securityhub:Disable"  
"securityhub:Dissociate"  
"securityhub:DeleteInvitations"  
"securityhub:DeleteMembers"
```

Protect your sensitive Amazon Simple Storage Service (Amazon S3) buckets

Specific S3 bucket deletion

```
"s3:DeleteBucket"  
"s3:DeleteBucketPolicy"
```

S3 public access settings

```
"s3:PutAccountPublicAccessBlock"  
"s3:PutBucketPublicAccessBlock"  
  
"s3:PutObjectVersionAcl"  
"s3:PutObjectAcl"
```

Object and version deletion

```
"s3:DeleteObject"  
"s3:DeleteObjectVersion"  
"s3:DeleteObjectTagging"  
"s3:DeleteObjectVersionTagging"  
  
"s3:PutLifecycleConfiguration"
```

Morgan Stanley AWS Organizations: Evolution and lessons learned

Itay Cohai (he/him)

Executive Director Cloud Platform
Engineering
Morgan Stanley

Zulfi Haider (he/him)

Vice President Cloud Platform Engineering
Morgan Stanley

That's how we started

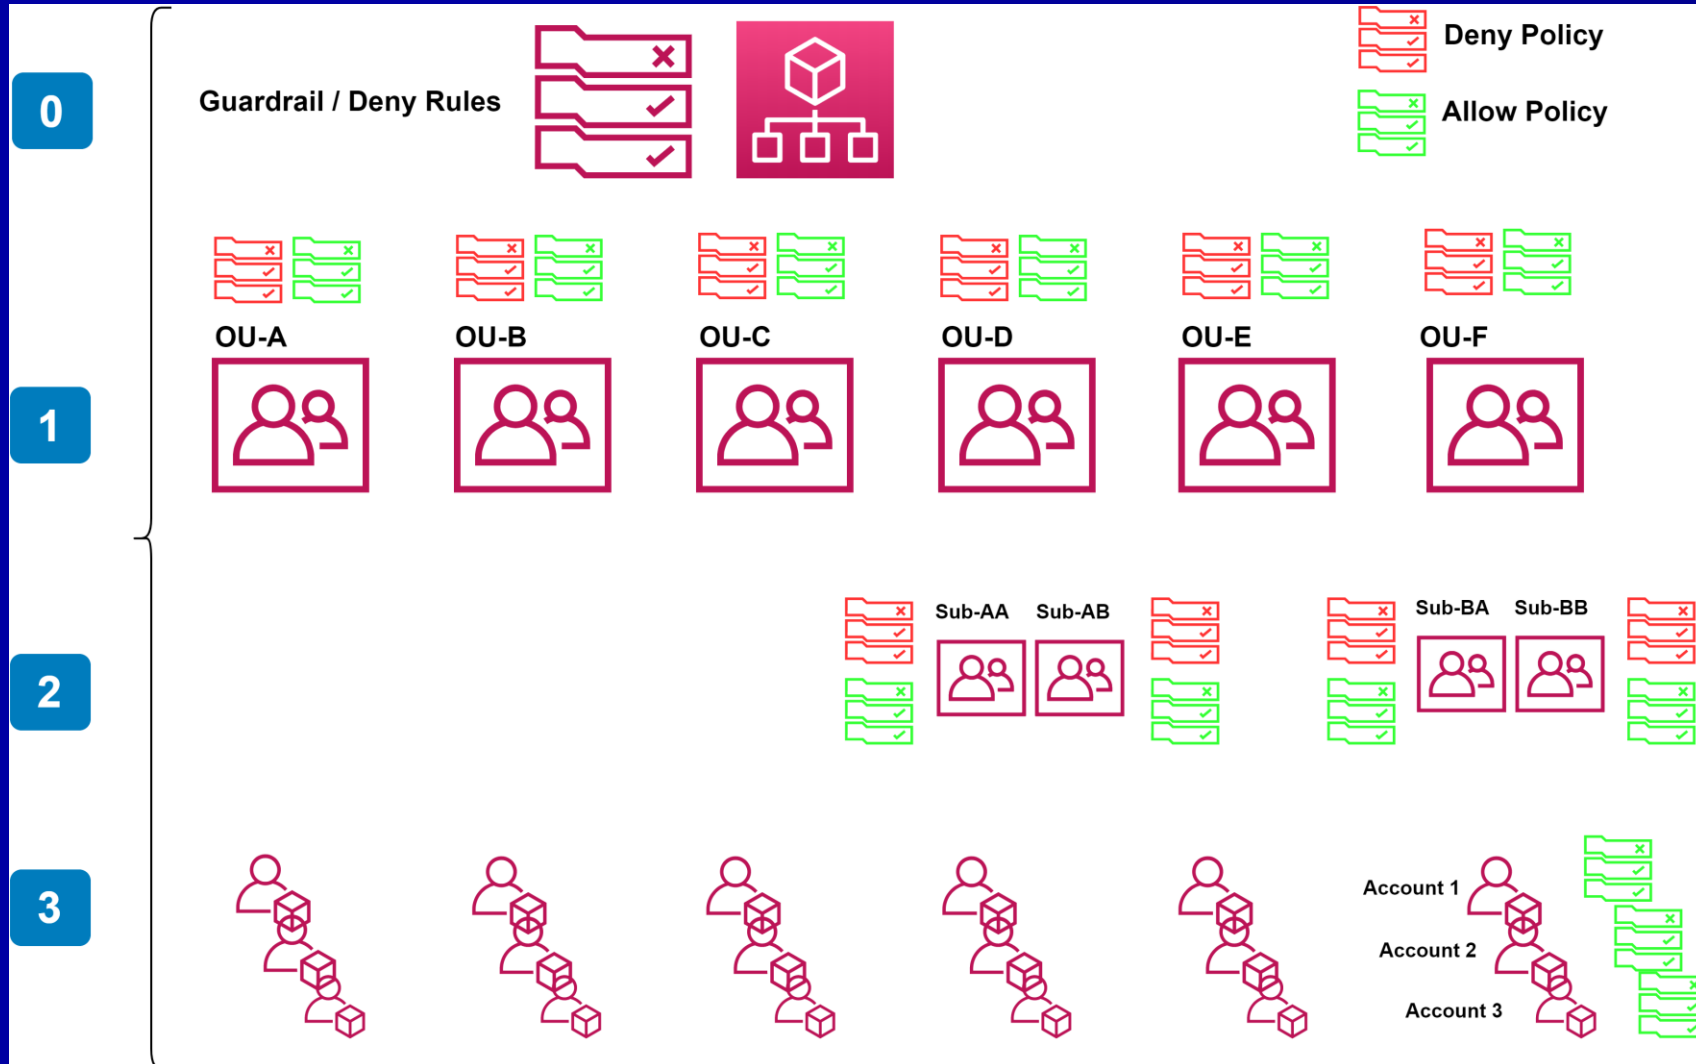

Then comes a **re-org**

Lessons learned

- **OUs shall be** based on something that **does not** change frequently
- **OUs shall be** based on technical controls and **not HR structure**

That's how we deployed **deny policies**

Then comes **troubleshooting**

Lessons learned

- Deny policies **shall** be
 - Single layer
 - Immutable
 - Highly guarded

Centralized Deny
Policy

And then we run out of **policy space**

Lesson learned

- Deny policies shall be
 - Fewer
 - Simpler
 - Coarse grained

Rule of thumb

If a deny policy is too fine grained
OR

If a deny policy is too long

Then it does not belong in SCP

Showcasing our AWS organization

Enforcing our guardrails

Organizing our Organizations deployment

Use cases

UC1: Organization housekeeping

- We manage all phases of account lifecycle through code. `CreateAccount` and `CloseAccount` permissions are only available to automation principals. Human roles cannot create or close accounts.
- We deploy SCP content through code.
- Our organization membership is by birth (account creation) not by invitation.
- A member account cannot leave organization/cannot be removed from organization.
- Permissions like `LeaveOrganization`, `InviteAccountToOrganization`, or `RemoveAccountFromOrganization` are permanently blocked.

Rationale: An account leaving our organization or removed from our organization bypasses SCP guardrails and has security consequences. Accidental account closure has operational consequences. Both options are available through two easy clicks on AWS console, hence needs preventive controls.

UC2: We explicitly allow services per account

- AWS service footprint is growing with new services being added.
- **Never** for FullAWSAccess at account Level.
- We take time to review security impact of each service before allowing such service.
- Out of over 200 services, we generally do not expect to use more than 30 services in a given account.

Rationale: Every service has an attack surface. Understand every individual service before allowing such service in our allow rules.

UC2b: We use a single baseline SCP attached to all accounts

```
{  
  "Sid": "AllowBaselineServices", "Effect": "Allow",  
  "Action": [  
    "billing:*",  
    "cloudtrail:*",  
    "cloudwatch:*",  
    "config:*",  
    "logs:*",  
    "guardduty:*",  
    "health:*",  
    .....,  
  ],  
  "Resource": "*"   
}
```

Rationale: Allow consistent baseline services required to enable automation, as well as security and operational controls for all accounts

UC3: We use SCP to deny exfiltration

```
{
  "Sid": "DenyS3WritesToUnauthorizedBuckets"
  "Effect": "Deny",
  "Action": [
    "s3:Put*"
  ],
  "Resource": "*",
  "Condition": {
    "StringNotEquals": {
      "aws:ResourceOrgID": "o-XXXXXX"
    }
  }
}
```

Rationale: Block path for uploading data to personal Amazon S3 buckets from within VPCs

UC4: Our guardrail policy attachments are immutable

- What is immutable – Build once, attach forever
- Guardrail SCPs are **permanently** attached to the org root
- **Deny** rules prevent actions for the whole org – No exception
- **Restrict** rules restrict actions for specific OUs
- How we do that – By using condition key **aws:PrincipalOrgPaths**
- So to exclude a restriction, we do not need to detach SCP or modify SCP, we move account to an OU that has exclusion to such restriction. And we monitor OU memberships based on rules.

Rationale: Affecting changes to SCP controls through OU membership allows us to be flexible while keeping our policy attachments immutable

UC5: We Disable all actions for Lock OU

```
{
  "Sid": "Lock",
  "Effect": "Deny",
  "Action": "*",
  "Resource": "*",
  "Condition": {
    "ForAnyValue:StringEquals": {
      "aws:PrincipalOrgPaths": [
        "o-xxxxxx/r-xx/",
        "o-xxxxxx/r-xxx/ou-xxx-xxxxxxxx/"
      ]
    }
  }
}
```

Deny actions for lock OU and root OU members

Rationale: Disable all control plane actions for an account

Morgan Stanley SCP best practices

1. **Deny Policies are our guardrails.** Attach guardrails to org root level
2. **Allow Policies are our enclaves.** Attach enclaves to leaf account level
3. Security Monitoring to assure **leaf accounts do not attach FullAWSAccess**, and operational monitoring to assure **OUs always attach FullAWSAccess**
4. Separation of duty between managing organization versus the rest of the account
 - Key organization artifacts are managed by **DevSecOps pipeline**, rest of AWS managed by **DevOps pipeline**
5. Separation of entitlement between org management account and leaf accounts
 - Access to org management account follows separate entitlement and approval
6. Every new service allowed in enclave follows a security review
7. OUs are our best friends for managing AWS account group restrictions
 - Guardrail policy immutably attached to org root and denies actions based on OU membership (aws:PrincipalOrgPaths)
8. Restrict Regions based on OUs
9. Put the **unneeded accounts in LOCK OU**
10. Only **allow root login in a highly monitored OU**
