

ENTERPRISE SKILLS TRANSFORMATION

Cloud Enablement Analysis (CEA)

Assess your organization's cloud enablement ability and learn from global best practices

What is our Cloud Enablement Analysis?

The AWS Cloud Enablement Analysis (CEA) is a point-in-time assessment of your organization's cloud enablement and transformation abilities.

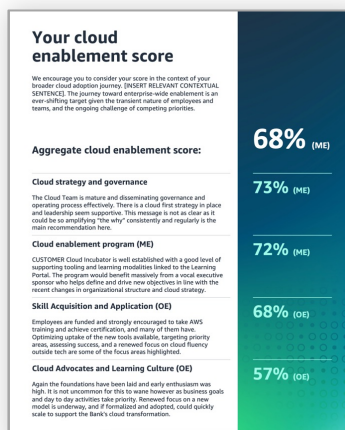

Over 4 weeks, we leverage AWS's expertise delivering cloud enablement and training programs worldwide to evaluate your cloud enablement score, then provide related recommendations.

How it works

AWS conducts a series of interviews with 4-6 key technical and learning stakeholders across your business. We dive deep into your cloud learning practices and culture, then evaluate it against our comprehensive enablement categories.

The final insight report includes a heat-map of your organization's score in each core enablement category, which illustrates what to maintain and which require more attention.

We tailor the report with practical recommendations and quick wins to drive increased cloud enablement maturity, specific to your organization. Leverage this knowledge to create your organization's best possible upskilling program.

Program Benefits

Identify cloud enablement gaps and strengths

Set new benchmarks or evaluate progress in cloud enablement maturity

Gain access to global learning best practices

Receive tangible recommendations for enablement improvement

“ When it comes to cloud adoption, the biggest challenge isn't technology — it's the people and processes that must upskill, change, and adapt. ”

Forbes

“13 Biggest Challenges When Moving Your Business to The Cloud”

The Cloud Enablement Analysis Interview and Report Process

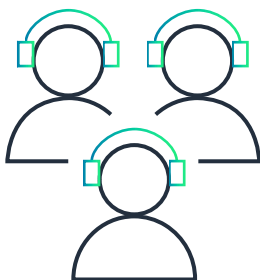

1. Evaluate current state.

AWS will interview 4-6 stakeholders (60 minutes each) across your organization to learn about the current state of cloud enablement, then analyze against global best practices and our comprehensive enablement framework to create your CEA report.

2. Gain insights.

The CEA report will detail findings for each category within the framework. Results lead to an enablement scorecard and heat-map that showcase your top improvement categories. We tailor recommendations or addressing the identified enablement opportunities and challenges.

3. Address the findings.

Together, we will explore the report playback and make a follow-up plan for recommendations. We end our engagement with a commitment to connect you with relevant AWS teams to accelerate your enablement program maturity and organization-wide cloud adoption.
