

Build IBM Solutions at Startup Speeds on AWS

Adapt to evolving customer expectations

Drive innovation to remain competitive

With innovation at the core of digital transformation initiatives, many organizations are taking on “cloud first” IT strategies to more rapidly adapt and react to changing requirements. As more organizations invest in their cloud transformations, accelerated time-to-market is becoming a key driver for maintaining competitive advantage. Often, organizations lack the skillsets to quickly design, build, and deploy robust solutions, driving them to seek out similar solutions that may not meet all of their business requirements.

IBM Garage solutions for AWS

Co-create IBM technologies on AWS alongside IBM experts

IBM Garage is an engagement model designed to enable organizations to co-create solutions with a multi-disciplinary IBM team using IBM technology on AWS. Together with IBM Garage, organizations will gain the skills and knowledge needed to design, deploy, and manage innovative solutions that meet their unique business requirements on an accelerated timeline. IBM Garage’s proven methodology designed for lean, agile development can reduce solution design time by 75%.

From modernizing cloud capabilities, to mitigating cost and risk, working with IBM Garage provides the expertise and best practices necessary for building innovative solutions on the cloud.

IBM Garage engagement workflow

Proven end-to-end workflow for a faster, low-risk solution build

Engagement models

Co-create in a medium that aligns with your business

Virtually

Collaborate with a Garage Squad through online meetings, ideation, discovery, and more through virtual mediums

IBM Garages

Engage with a Garage Squad at one of IBM's many physical locations located globally

On-premises

Host a Garage Squad on-premises where they'll bring IBM capabilities and accelerators to you.

Accelerating your journey to the cloud

IBM Garage members (Lead, Cloud Architect, Full-Stack Developer, and Designer) engage with your team to co-create your solution while educating your team throughout the process. Regardless of where your organization falls in the cloud lifecycle, IBM Garage can help accelerate your journey to:

Cloud: Build, deploy, and operate IBM Cloud® Paks – enterprise-ready containerized solutions that gives you a faster, more secure way to move core business applications to AWS. Add confidence to your cloud migration by working with IBM Security experts to identify vulnerabilities and address potential threats.

IoT: Build smarter supply chains and benefit from advanced technologies like IoT, blockchain, and more.

Artificial Intelligence: Incorporate AI to create intelligent workflows, drive autonomous decision making for end-customer solution development, and improve business continuity and modernization.

IBM Garage customer success: IDC

“ A core strength of IBM is turning innovation and ideas into value. Today, that happens for IBM's clients through the Garage methodology. The Garage methodology allows companies to develop a deep innovation culture through the support of a trusted partner in IBM and the right mix of services, technical, partner, talent, and design resources when they engage. The strength of the Garage methodology plus IBM's strategic commitment to Garage results in a valuable partner in the development of a corporate innovation capability.
