(CF26-S1) Establish a relationship with your cloud provider, understanding what services are available in what region, and the different requirements they fulfill.

(CF26-S2) Define your cloud consumption policies and strategy. What services will be available in the cloud? How will your workloads and applications be deployed on the cloud?

(CF26-S3) Build knowledge about the cloud and the different technologies it provides across your organization. Identify key stakeholders that will be involved when you establish the different capabilities of your AWS environment. Build cloud capability and enable your stakeholders across your organization.

(CF26-S4) Use AWS Artifact to collect the AWS security and compliance reports and select online agreements. Reports available in AWS Artifact include service organization control (SOC) reports, payment card industry (PCI) reports, and certifications from accreditation bodies across geographies and compliance verticals that validate the implementation and operating effectiveness of AWS security controls.

(CF26-S5) Identify what compliance frameworks you need to adhere your workloads on the cloud to, and learn about the shared responsibility model. Ensure your data and your workloads provide you with enough information to report your compliance requirements.
