

# Guidance for Launching a Simple E-commerce Website with WordPress on AWS

Quickly launch a WordPress website with ecommerce and analytics capabilities, without having to delve into complex coding or configuration. This Guidance provides AWS customers with an automatic, intuitive way to set up their ecommerce website in a few minutes.

- 1** Website content is served through an **Amazon CloudFront** instance hosted in **Amazon Lightsail**.
- 2** All resources are managed in **Lightsail**, including compute and storage.
- 3** WordPress Administrator credentials are created, stored and retrieved from **AWS Secrets Manager**.
- 4** Custom domains and secure socket layer (SSL) can be configured in **Lightsail** and the customer's domain registrar.
- 5** WordPress plugins (WooCommerce, Elementor, and website usage analytics) are automatically installed and activated in the customer's WordPress instance.
- 6** Your website instance is now created. You can log in to the website with the user name and password that you provided in step 3.
