Optimize Your Cloud Performance With Proactive Support
Overview

Cloud has become a key pillar of most enterprises’ digital transformation strategies. Businesses are both migrating new processes to the cloud and augmenting their existing cloud operations to take advantage of new and evolving services. However, these are complex initiatives that many organizations stumble through due to skill and knowledge gaps. This ironically leads to slow and costly processes to implement and optimize systems meant to deliver speed and agility. Cloud and managed service providers offer support services, which have become much more proactive and strategically focused in response to market demand for increased levels of responsiveness, access to tools, and strategic guidance. Today’s cloud support services are much more than just “insurance” to be used in reactive circumstances, and their value extends beyond reactive assistance.

In March 2018, AWS commissioned Forrester Consulting to explore the use of cloud support services and the related challenges and benefits. Our study found that using proactive cloud services can effectively accelerate IT transformation and facilitate robust understanding and visibility of an organization’s cloud environment.

Location
100% US

Company size
- 42% 1,000 to 4,999 employees
- 41% 5,000 to 19,999 employees
- 17% 20,000+ employees

Respondent level
- 18% C-level executive
- 12% Vice president
- 39% Director
- 31% Manager

Top industries
- 19% Financial services and insurance
- 17% IT
- 12% Healthcare
- 12% Manufacturing/materials
Cloud Management Comes With Many Challenges

Cloud requires an array of new skill sets that many IT teams are learning as they go. While organizations are more comfortable with ongoing cloud operations, ticket response, and network design, they are often not equipped to easily migrate to or manage cloud on their own. Our study found that organizations struggle with:

- Managing privacy and compliance.
- Planning, architecting, and choosing services.
- Initial implementation and optimization.

Cloud migration is a complex process that requires several considerations for each workload to ensure connectivity, interoperability, reliable application deployment, and monitoring.²

Firms Need Cloud Support Services To Go Beyond Reactive Issue Fixes And Be A Proactive Partnership

While 42% of firms rely on cloud support services for reactive support for ongoing issues — the traditional use case for cloud support — this is not their biggest need. Because of the challenges faced with cloud adoption, firms demand that service providers deliver skills, best practices, and tools that will make implementation and migration easier across the board.

Firms look to their service providers to be proactive, rather than reactive, and to fill in the gaps with subject matter expertise and guidance to help achieve their desired business outcomes.

Skills shortages remain the largest single barrier to achieving cloud success — leading customers to look outside their organizations for proactive and strategic help.³
Cloud Support Services Have Evolved Into Essential Solutions

Cloud support has evolved to become much more than a reactive problem-solving service. Support extends the value of cloud services and accelerates implementation by providing best practices and guidance to help decision makers achieve business success.

Cloud support can ease security, implementation, support, and management challenges. Almost three-quarters of firms report that support services addressed their security and compliance concerns, as well as the initial implementation of the services themselves.

To what extent are support services beneficial in helping you to address these challenges?

- **74%** Security concerns
- **72%** Implementation of cloud services
- **70%** Managing compliance
- **68%** Ongoing cloud operations
- **65%** Ticket resolution time
- **64%** Tracking across resources

Value Lies In Knowledge And Optimization

Growing the use of cloud — spurred by heavy migration — drives increasing requirements for continuous optimization across multiple dimensions. Customers perceive a lot of value in premium support services that can help optimize cost and infrastructure, mitigate risk, and offer best practices and guidance along the way.

Leverage Your Cloud Provider’s Premium Support Services For Best Results

While both cloud and managed service providers are popular resources, public cloud providers are the support service providers of choice. Consumers rely on their cloud service providers for implementation/adoption guidance already, so it’s no surprise that more than two-thirds of respondents choose to extend these same relationships to include advanced levels of support.

Respondents prefer to receive support from their public cloud providers because of their well-regarded product knowledge, due to cost advantages, and because they’ve already built a trusted relationship with them.

71% of respondents receive their cloud support services from their public cloud providers.

Why do you use a cloud provider (as opposed to other types of service providers) for cloud support services?

- They have the best product knowledge. 59%
- We already have a trusted relationship with them. 46%
- They offer the best pricing. 46%
- They have the most knowledge about companies in my industry. 42%
- They can help drive quicker bug fixes and/or feature updates. 35%

Cloud Support Services Deliver Significant Value

The desire for faster change implementation and better cost optimization drives cloud support use, but that’s not all. Customers have found that cloud service providers are brimming with guidance, and they say they rely on these providers for access to best practices and consultations with subject matter experts.

Whatever the reason, investments pay off. Ninety-seven percent of firms that use cloud support services say that they are at least somewhat satisfied with their investments, and not a single respondent is dissatisfied.

| Support services allow us to implement changes faster. | 49% |
| Provider has more expertise on optimizing our costs. | 48% |
| Provider offers us access to best practices. | 39% |
| Support services allow us to save money/time with consultations from subject matter experts. | 36% |
| Provider has more expertise on optimizing our infrastructure. | 33% |

Conclusion

Across industries, enterprises consider cloud to be an important strategic play, and they should consider their cloud partner relationships the same way. Support services have the potential to be much more than a reactive break-fix service and, in fact, are often drivers of cloud success, thanks to their significant value to infrastructure optimization, proactive cost optimization, risk mitigation, and more. Cloud service providers are well-positioned to be successful partners due to their deep product knowledge and often advantageous pricing.
