Build in-house skills and an innovative learning culture

You’re investing in the AWS Cloud, modernizing applications and workloads, and transforming the way you work and do business. Now, it’s time to invest in your people and give energy and momentum to your ongoing cloud journey, creating an innovative culture of continuous learning that will help propel your organization into the future. The AWS Skills Guild is a tailored educational experience which helps build the skills your organization needs to get the best from the AWS Cloud and support key initiatives and projects. The program generates excitement about AWS, while also increasing affinity with the technology and creating an enthusiastic learning culture. Building a groundswell of cloud knowledge and skills across your organization, we’ll also drive AWS Certifications for staff to lead successful future cloud projects, which also helps both attract and retain top talent.

What does the program include?

**Excitement:** Investing in your peoples’ skills development and working with transformative technology is exciting! We’ll help you maximize this excitement to create momentum for your journey.

**Enablement:** Developing deep technical skills that build execution capability in parallel with the establishment of business-wide competency by investing in foundational training. This enables the whole of the organization to have a benchmark level of understanding of cloud terminology, and the new way of doing business.

**Advocacy:** Creating vocal advocates who drive momentum and ownership. They champion developing a “how to cloud” culture within your organization to establish a self-sustaining culture of continuous learning. AWS Training and Certification will partner with you to implement the program and see it through.

You’ll find a schedule of typical AWS Skills Guild activities on the following page.

What do you need from me?

These programs are a partnership, and some commitment will be required from your organization, dependent on the structure of your program. At the very least, we’ll ask that you nominate a team to lead the program internally and an executive sponsor to champion the program upstream.
